Transformers**

Westinghouse

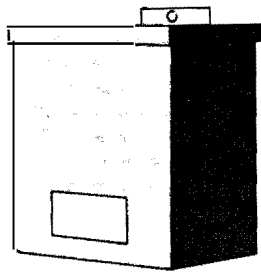

**Standard Dry Type Transformers
5000 Volts and Below**

Type EP UL Listed

Single Phase ¼ Kva—25 Kva

Small, quiet operating transformers for indoor and outdoor applications such as: control transformers in switchgear and motor starters, control power transformers in sewage and waterworks facilities, indoor and outdoor lighting transformers, and boosting units in appliance and air conditioning systems.

Price List 46-820
Descriptive Bulletin 46-850
Technical Data 46-860
Technical Certification Section 46-870

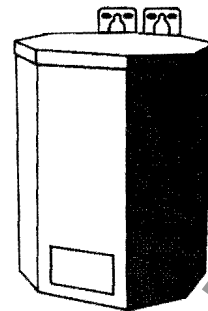

Type EP Autotransformer UL Listed

Single Phase ¼—20 Kva

A family of two-winding autotransformers, suitable for buck and boost applications and general light and power applications in three-phase autotransformer banks. Buck and boost connection diagrams furnished with the transformers.

Price List 46-820
Descriptive Bulletin 46-850
Technical Data 46-860
Technical Certification Section 46-870

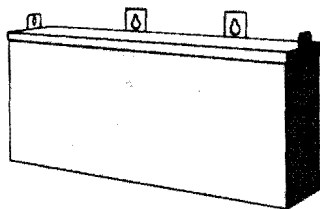

Type EP Isolating Type UL Listed

with Electrostatic Shielding
Single Phase 3—25 Kva

Special transformers for critical electrical installations, such as hospital operating and X-ray rooms requiring complete isolation of electrical apparatus from all other circuits.

Price List 46-820
Descriptive Bulletin 46-850
Technical Data 46-860
Technical Certification Section 46-870

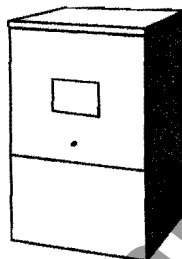

Type EPT UL Listed

Three Phase 3—30 Kva

Like the EP, these are compact and quiet working transformers for voltage transformation in a variety of commercial, institutional, and residential load areas including lighting, heating, sewage treatment, ranges, air conditioning, exhaust fan systems, control circuits, and portable tools.

Price List 46-820
Descriptive Bulletin 46-850
Technical Data 46-860
Technical Certification Section 46-870

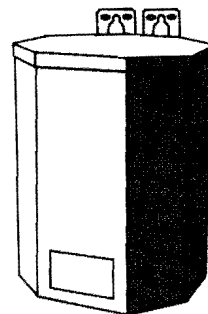

Indoor-Outdoor "Green Line" Mini-Power Center

Single Phase 3—25 Kva

The Westinghouse Green Line Mini-Power Center offers one unit installation of a Green Line dry type potted transformer in combination with primary and secondary breakers. This single unit can be installed in place of the usual three separate components—primary breaker, transformer, and panelboard—saving up to 31% of the cost of time and material in installation.

Price List 46-820
Descriptive Bulletin 46-855
Technical Certification Section 46-870

Type EP Marine Single Phase 2—25 Kva

Dry type transformers designed for shipboard use. They meet the rigid requirements of AIEE-45 and are approved for shipboard use by the U. S. Coast Guard. (Spec. CG-259).

Price List 46-820
Descriptive Bulletin 46-850
Technical Data 46-860
Technical Certification Section 46-870

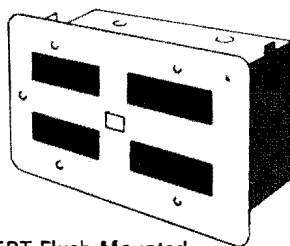

Type EPT Explosion Proof

Three Phase

These transformers have a special explosion-proof housing that suits them for outdoor applications in corrosive atmospheres and are applicable to selected divisions, locations and groups of article 500 of the National Electric Code.

Price List 46-820
Descriptive Bulletin 46-850
Technical Data 46-860
Technical Certification Section 46-870

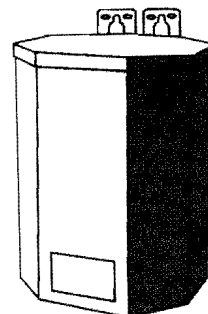

Type EPT Flush Mounted

Three Phase 9—30 Kva

Transformers designed especially for installation in the inside walls of factories, offices, schools, and hospitals. This lets walls do double duty and avoids locating supply transformers in the basement, stair landings, and special closets.

Price List 46-820
Descriptive Bulletin 46-850
Technical Data 46-860
Technical Certification Section 46-870

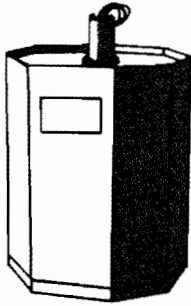

Type EPT Autotransformer

Three Phase 2 ½—225 Kva

A line of autotransformers designed primarily for boosting 208 volt network circuits to supply 240 volt, three phase, 3-wire loads.

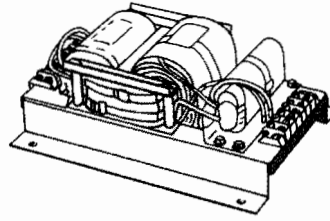

Price List 46-820
Descriptive Bulletin 46-850
Technical Data 46-860
Technical Certification Section 46-870

Type EPS Submersible
Single Phase $\frac{1}{4}$ —10 Kva

These dry type transformers may be submerged under water, either continuously or intermittently, and are ideal for areas subject to flooding, hurricanes, or high coastal humidity. The units are also good for direct burial and can be mounted in any position.

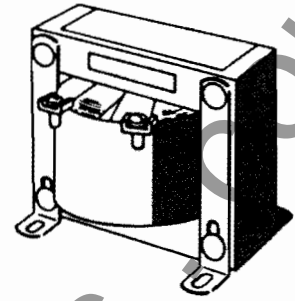

Price List 46-820
Descriptive Bulletin 46-850
Technical Data 46-860
Technical Certification Section 46-870

Type SW 120—1000 Va Single Phase

The Westinghouse Type SW Transformer is an ac power conditioner for general purpose use to protect against line-borne transient overvoltages, harmonics and transient discontinuities in the input ac. This transformer is highly effective as a transient or electrical noise suppressor.

Price List 46-830
Descriptive Bulletin 46-854

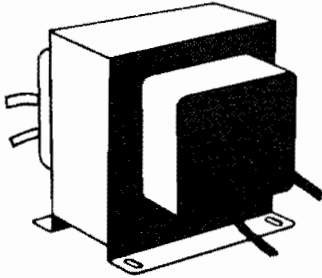

Control Transformers Type MTA

Listed as a recognized component by UL 1000 Va and below. For Machine Tool Control 50-5000 Va

This family of Westinghouse Control Transformers provides stepped-down voltages to machine tool control devices. This enables control circuits to be isolated from all power and lighting circuits, providing greater safety for machine operators. Because of their compactness, these transformers are well suited for "tight space" situations.

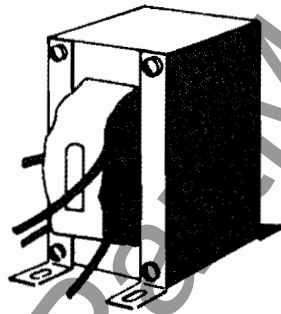

Price List 46-830
Descriptive Bulletin 46-851

Type LC for Control Circuit Transformer
25—200 Va (with end bells)

LC control transformers are used in a variety of control circuits for operation of small motors, oil burner controls, furnace dampers, relays, heating elements, pilot lights, solenoid operated valves, electrically operated gas valves, switch-board control circuits, burglar alarm systems, and signalling systems.

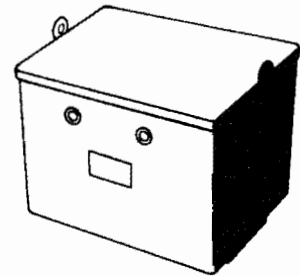

Price List 46-830

Type SC for Control Enclosures
50—100 Va

Type SC transformers for control enclosures provide stepped-down voltages to control devices and enable control circuits to be isolated from all power and lighting circuits. The units are particularly suited for applications with space limitations and will fit standard motor starter boxes.

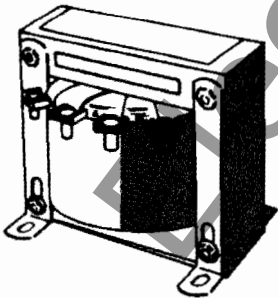

Price List 46-830

Saturable Core Inductors Type SCI
 $\frac{1}{4}$ —25 Kva

The Type SCI (saturable core inductor) is a variable impedance device that enables a complete range of control from 1% to 100% power in a smooth, stepless manner. The devices have no moving parts, avoiding the maintenance required by an induction regulator or powerstat.

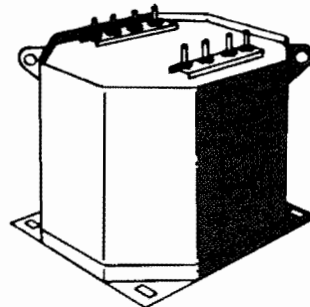

Price List 46-830
Descriptive Bulletin 46-853

Type MTC Listed as a recognized component by UL 1000 Va and below. For Machine Tool Control 50—5000 Va (extremely good regulation)

The type MTC is a control transformer for machine tools designed specifically to handle magnetic loads requiring extremely good regulation of all power factor loads.

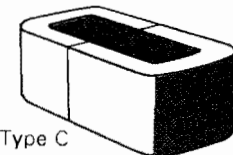

Price List 46-830
Descriptive Bulletin 46-851

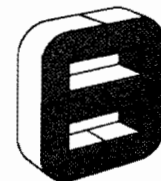

Type AP for Machine Tool Control
Single Phase 5-10 Kva

These are compact transformers for supplying stepped-down voltages to machine tool control devices in the 5 to 10 Kva range. These can also be used in any general purpose application where terminal boards for connections are required.

Price List 46-830

Type C

Type E

Ring Type

Hipersil Cores

Hipersil cores are grain-oriented material, sold through Manufacturing Representatives strategically located throughout the U.S. Refer to Greenville for locations. Price List 46-720
