### Specifications, Listings

<b>Class CTL (Current Twin Limiting)</b>	Where more than six disconnects are required, a main circuit breaker or main disconnect switch must be provided.
	c. Must include connector for bonding and grounding neutral conductor.
<b>Underwriters' Laboratories Inc. Listing</b>	All load centers comply with the Underwriters' Laboratories Inc. standards and are listed as follows:
	"Standard for Panelboards" UL67; Guide No. 320 BO File E31679 and E52977.
	"Standards for Cabinets and Boxes" UL50; Guide No. 60 A19 File E34724.
	"Requirements for Wire Connectors and Soldering Lugs", UL486; Guide No. 461 10-C File E7830.
	"Requirements for Service Equipment", UL869; Guide No. 380 FO File E11737.
<b>Federal Specifications</b>	All MLK series lug kits comply with Underwriters' Laboratories Inc. standards and are listed under Guide No. DHJR, File E31424, Volume W, Section 17.
	All grounding bars manufactured comply with Underwriters' Laboratories Inc. standards and are listed under Guide No. DHJR, File E31424, Volume W, Section 17.
<b>Canadian Standards Association Listing</b>	All circuit breakers 10 amperes and larger comply with the Underwriters' Laboratories Inc. "Standard for Branch Circuit and Service Circuit-Breakers" UL489; Guide No. 60 10.2 File E31424, and "Requirements for Wire Connectors and Soldering Lugs", UL486; Guide No. 461 10-C File E7830.
	All Westinghouse breakers and load centers where marked, are suitable for use with 60/75°C rated wire.
	All devices comply with the 22,000 A.I.C. — 10,000 A.I.C. U.L. series connected components File DKSY2 of the Recognized Components Index.
<b>Service Entrance</b>	<b>Lighting and Appliance Panelboards</b>
All main breaker and unit enclosures, and all main lug enclosures thru 12 circuit single phase and 18 circuit three phase are listed as suitable for use as Service Equipment when installed in accordance with Article 230-71 and Article 384-16 of the National Electrical Code. Refer to "Six Circuit Rule." Meter socket units are listed as Service Equipment.	Lighting and appliance branch circuit panelboards are defined in N.E.C. (Article 384) as "One having more than 10 per cent of its overcurrent devices rated 30 amperes or less for which neutral connections are provided". Article 384 also limits the number of overcurrent devices (branch circuit poles) to a maximum of 42 in any one cabinet. When the 42 poles are exceeded, two or more separate panels are required and may be electrically connected by Sub Feed Lug Kits.
This information is included on the wiring diagram as standard, no special label is required.	
These articles require that:	
a. Panels used as service entrance equipment must be located near the point where the supply conductors enter the building.	
b. A Load Center having main lugs only shall have a maximum of six operating handles to disconnect the entire Load Center from the supply conductors.

#### BR Circuit Breakers

Westinghouse Type BR plug-on breakers in the standard 1" per pole package have color-coded handles for easy ampacity identification and unique color-coded cases that indicate UL listed 10kA or 22kA interrupting ratings and can be used as main or branch disconnect devices. All are Type I.C. (interchangeable) devices; and are SWD, CSA and HACR approved. Typical ampacity range for BR breakers is 15-125 amperes.

#### GFCB® People Protection Breakers

Westinghouse Type GFCB (ground fault circuit breaker) combines state-of-the-art hybrid electronic technology with a circuit breaker mechanism in a compact 1" package. The GFCB automatically senses hot wire-to-ground faults in a 4 to 6 milliampere range, and shuts off the power thus providing an extra margin of safety beyond that of conventional circuit breakers. GFCB applications include bathrooms, cellar outlets, swimming pools, outdoor branch circuits, and kitchen branch circuits. Available in UL listed 120 and 120/240V ratings. Westinghouse also offers non-UL listed ground fault breakers for international applications as well as ground fault devices for equipment protection.

#### GFEP Equipment Protection Breakers

The Westinghouse Type GFEP device is similar to the Westinghouse GFCB, except that it is designed to protect equipment (not people) against damage from arcing ground faults. It is available with a 30mA trip level. Applications include infrared heating equipment, computer equipment, process control equipment etc. Special markings and color-coding immediately differentiate it from a GFCB breaker.

#### BJ Circuit Breakers

Available in 125 thru 225 ampere frames, Westinghouse Type BJ plug-on breakers have 10kA and 22kA interrupting ratings and can be used as main or branch disconnect devices. Color-coded handles identify ampacity ratings. Large extruded aluminum box lugs, complies with UL486B, provide cool operation. Tripping mechanism has thermal and magnetic protection for long-life performance. Rupture gas is safely vented into box gutter.

#### WFP-T2 Main Breaker Kit

WFP-T2 Main Breaker kits are definite purpose 125A to 200A UL listed main breaker assemblies, in 10kA and 22kA interrupting ratings for use in Westinghouse single phase load centers. They are factory mounted and are approved for field mounting in Mod/Line load center base units. WFP-T2 Main Breaker kits include special right angle terminals for easier "straight-in" wiring and breaker mounting plate, with hold down screw.

#### WFP Circuit Breakers

WFP Circuit Breakers are UL listed in both 10 kA and 22 kA Interrupting capacities and available in ratings 125 Amp through 225 Amp in both 2 and 3 pole versions. Their primary use is in the Westinghouse metering line serving as tenant mains in meter stacks or meter packs. They are the same breaker as their WFP-T2 counterpart, except they do not have the offset lugs, and do not come including the main mounting plate. WFP breakers cannot serve as feeder breakers in load centers due to their unique stab mounting feature.

#### BD Circuit Breakers

BD plug-on breakers have the same construction as Westinghouse Type BR 1" per pole devices except that 2 poles are in a space-saving 1" package. UL listed interrupting rating is 10KA. Color-coded handles identify ampacity rating through 50 amperes. All ratings are SWD, CSA, and HACR approved. Exclusive CTL rejection feature allows only 42 circuits in the panel in compliance with NEC Article 384-15.

#### BQ Circuit Breakers

Quadplex® construction of Westinghouse Type BQ plug-on breakers incorporates two duplex breakers assembled together to provide various combinations of 2 pole and single pole devices in a 2" package, and allow compliance with NEC Article 240-20(b). The 2 pole combinations of Westinghouse Type BQ breakers are marked "independent trip" meaning that each pole of a 2 pole device trips independently of the other, but may be actuated jointly by means of the handle tie. Independent trip devices may only be used on 3 wire Edison circuits where the neutral is present. All ratings are SWD, CSA, and HACR approved.

#### BQC Circuit Breakers

Quadplex construction of Westinghouse Type BQC plug-on breakers incorporates a special internal common trip cam. BQC breakers are available in several combinations of 2 pole and single pole devices wherein the 2 pole circuits have an internal common trip mechanism. These breakers are labeled "common trip" and meet all the requirements of UL489 paragraph 9.1 requiring multipole breakers to have common trip. Common trip breakers are required on all 240V circuits where there is no neutral present such as water heaters, baseboard heat, air conditioners and other motorloads. All ratings are SWD, CSA, and HACR approved.

#### Special Application Breakers

As the name implies, these devices are designed for special applications as required by the National Electrical Code.

**Water Heater Breaker:** Some watt-hour meters incorporate rate register switches used in conjunction with off-peak rates. Water Heater breakers do not derive their circuit from the load center stab. The line and load side of the breaker are fed to terminals on the breaker. Except for these terminations, the device offers normal circuit breaker protection.

**Switching Neutral Breaker:** Primary application for the Westinghouse switching neutral breaker is for protection of process equipment such as gas pumps that utilize flammable liquids. Non-automatic pole breaks the neutral power leg, minimizing the danger of arc conditions.

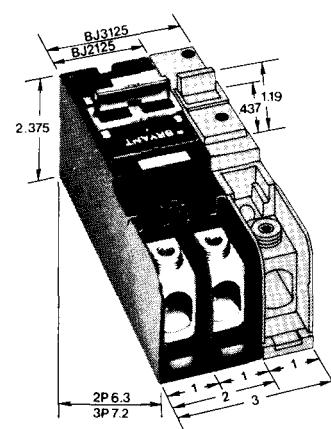

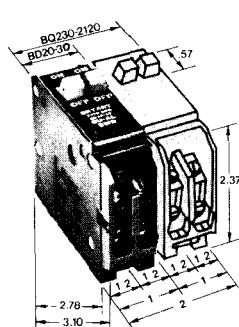

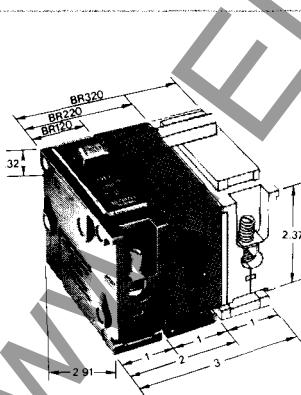

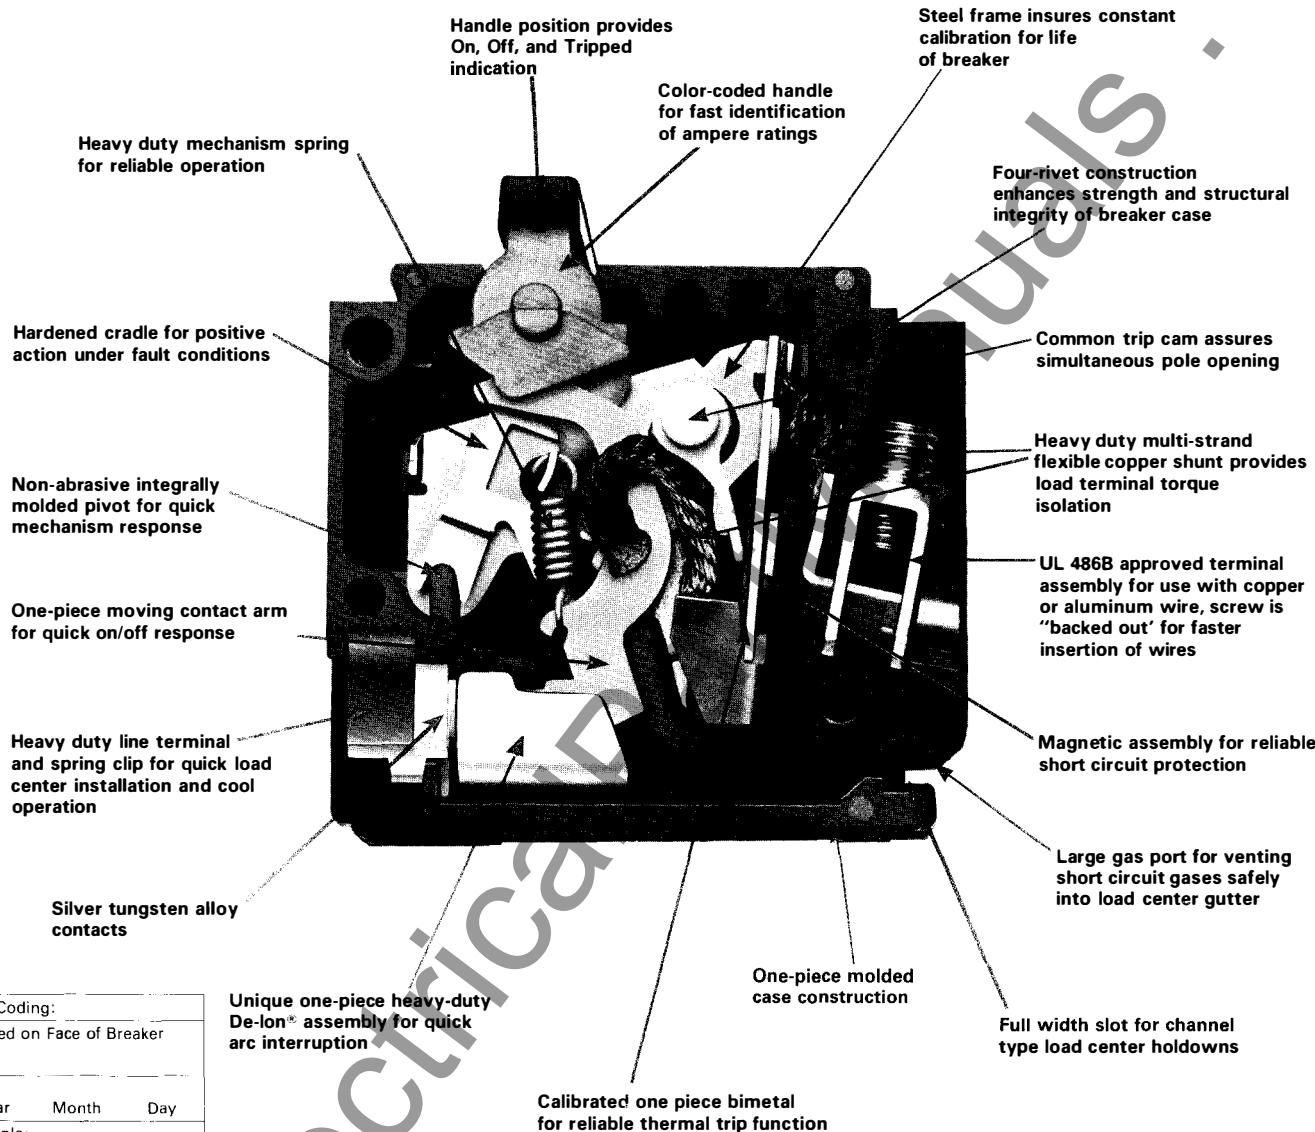

**2 Pole Breakers 120V or More to Ground:** Used on Delta distribution systems, these Westinghouse Type BR breakers are applied on phase legs where voltage to ground is above 120V.

**Non-Automatic Molded Case Switch:** Identical to comparable circuit breaker frames with this exception: non-automatic molded case switches do not have thermal or magnetic trip elements.

<sup>①</sup> Alternate Terminals available on special order, or order directly for field installation.

### Exception Table for Ampacity of Conductors

#### Three-Wire, Single-Phase Dwelling Services

In dwelling units, conductors, as listed below, shall be permitted to be utilized as three-wire, single-phase, service-entrance conductors and three-wire, single-phase feeder that carries the total current supplied by that service. Grounded service-entrance conductors shall be permitted to be two AWG sizes smaller than the ungrounded conductors provided the requirements of Section 230-42 are met.

#### Maximum Number of Conductors in Trade Sizes of Conduit or Tubing (Based on Table 1, Chapter 9)

Conduit Trade Size (Inches)	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3	3 1/2	4	5	6

	700	1	1	1	2	3	5	7	9	14		
	750	1	1	1	2	3	5	7	9	14		

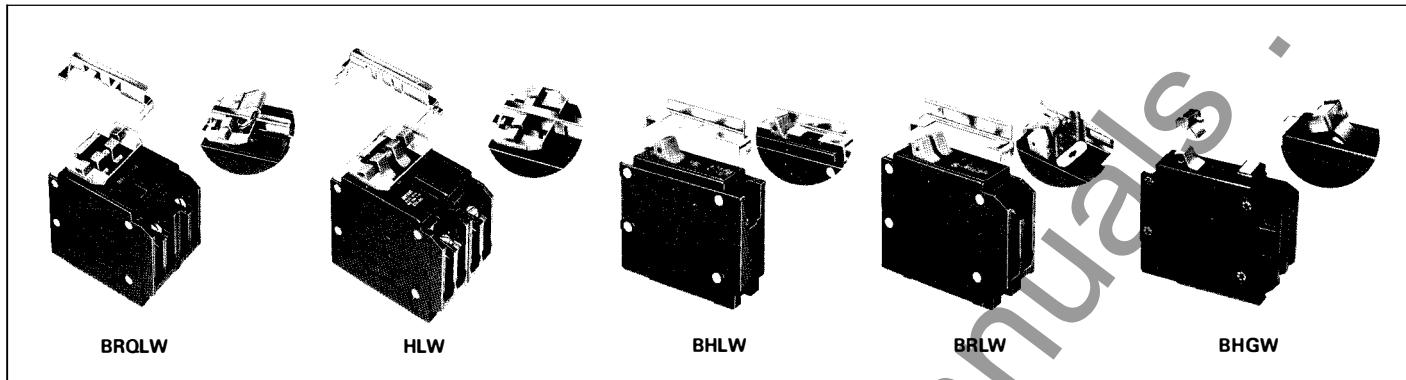

<sup>†</sup>The overcurrent protection for conductor types marked with an obelisk (<sup>†</sup>) shall not exceed 15 amperes for 14 AWG, 20 amperes for 12 AWG, and 30 amperes for 10 AWG copper; or 15 amperes for 12 AWG and 25 amperes for 10 AWG aluminum and copper-clad aluminum after any correction factors for ambient temperature and number of conductors have been applied.

\*For dry locations only. See 75 C column for wet locations.

<sup>②</sup> Refer to Exception Table at right for conductor sizes permitted on single phase, three wire residential service.

## Circuit Breaker Accessories and Wire Ranges

### Lockdogs and Padlock Devices

Three newly designed accessories provide positive, tamper-proof performance for circuit breakers installed in commercial, high-traffic and generally accessible areas. The **BHLW** and **HLW** lockdogs, the **BRLW** and **BRQLW** padlock devices are designed to hold the circuit breaker operating handle in the "ON" or "OFF" position. Protects critical operating circuits from unauthorized tampering or use. The load center cover holds

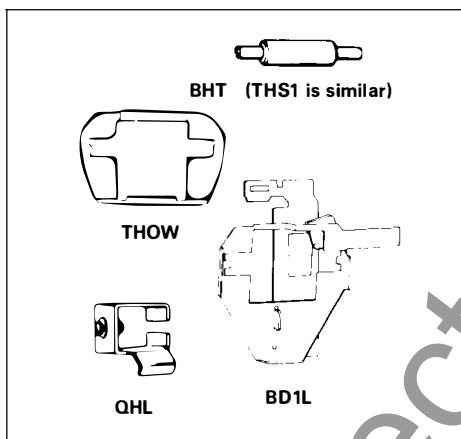

these devices securely in place. Lockdogs and padlock devices do not defeat the trip function of the circuit breaker. (Padlock not supplied). Lockdog device can be reversed for "ON" or "OFF" handle position.

### Basic Installation Instructions

1. Install and wire circuit breakers in accordance with N.E.C. and local codes.
2. Install **HLW**, **BHLW**, **BHGW**, **BRLW**, or **BRQLW** according to instructions with each item.

**HLW** has break-off tabs that provide independent operation of inner or outer handles.

3. Punch-out appropriate "shingles" for circuit breaker handles in load center cover.
4. Secure cover to load center with cover screws. Items are now in place and cannot be removed.
5. For padlock devices, turn circuit breaker handle to the "on" or "off" position and install padlock.

### Wire Ranges

Circuit breaker load terminals are of the box lug type. These terminals are listed with Underwriters' Laboratories Inc. for the wire ranges shown in table.

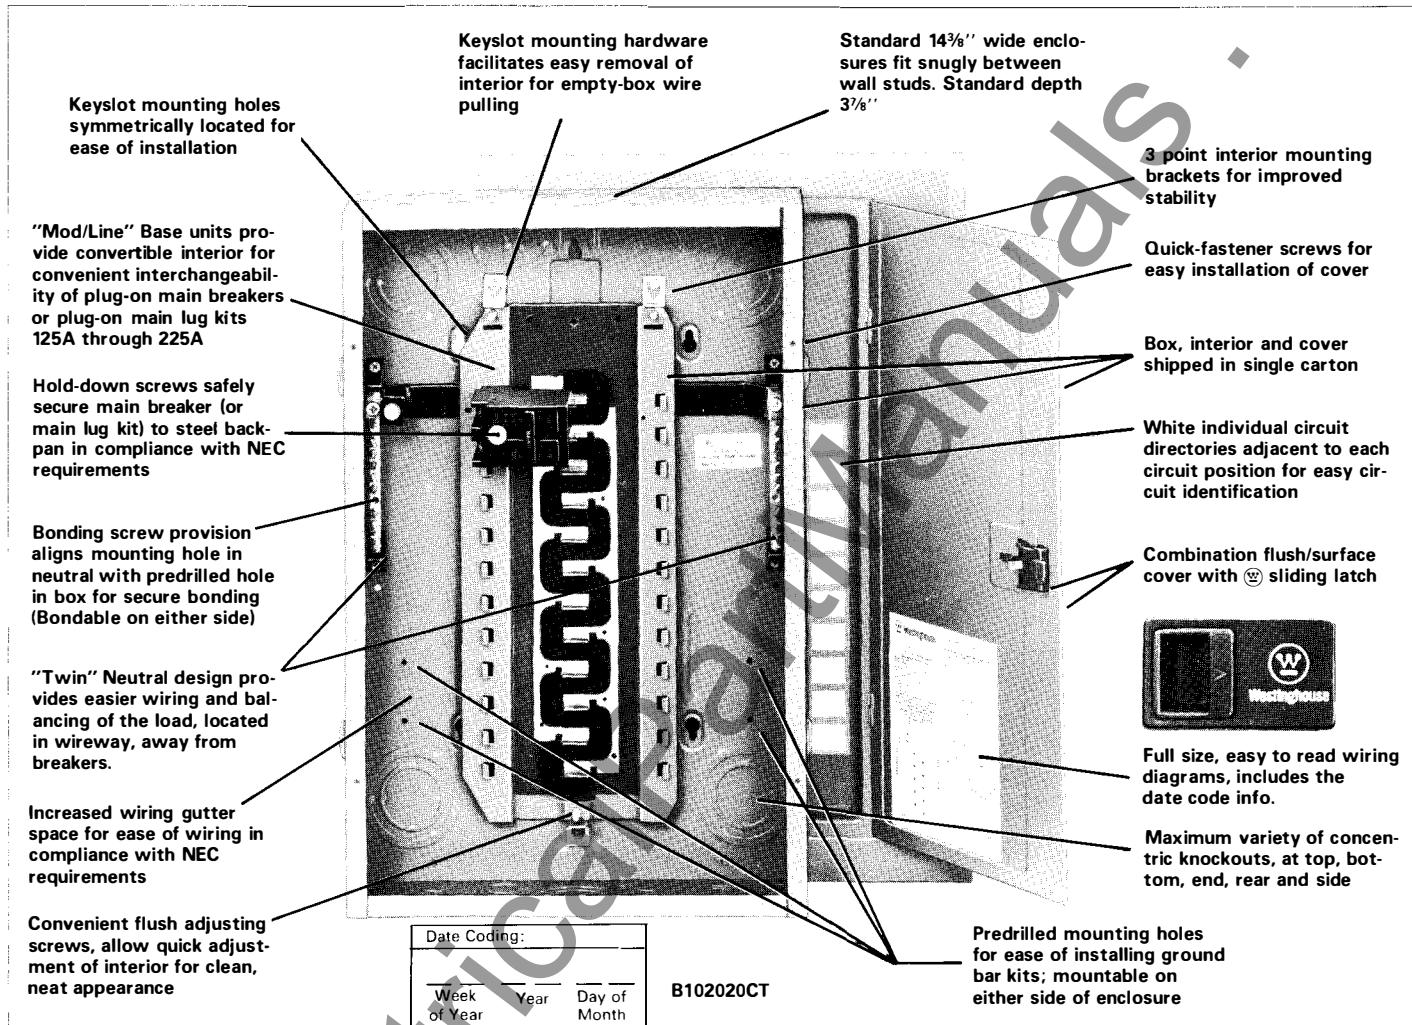

All terminals are "backed off" when received to allow faster insertion of feeder conductors.

① All main breaker load centers are limited for use as service entrance equipment and are shipped with a bonding screw kit. The max. main rating of the panel is the main breaker rating when used as service entrance equipment.  
 ② 22,000 AIC Rating maintained when BR, BD, BQC 10,000 AIC branch breakers are used in conjunction with BRH or WFPW main breakers.  
 ③ For other 22KAIC Ratings refer to Mod. Line Base Unit and associated main breaker kits. Only catalogs shown are available as factory assembled.

④ Refer to pages 17, 18, and 19 for Box Style Number and Dimensions.  
 ⑤ DK Main Breaker is rated 65,000 AIC @ 240V and allows a 22,000 AIC rating on the panel when BR, BD, BQC, BJ are used as branch breakers. Alternate available terminals.  
 ⑥ Includes RH200 Hub and thru-feed lugs for both phase and neutral.  
 ⑦ Remove suffix "2" for use with previous Type Load Centers.

<sup>①</sup> 22,000 AIC Ratings are maintained when BRH branch breakers are used. 22,000 AIC Rating maintained when BR, BD, BQC are used as branch breakers only in conjunction with a main BRH or WFPH Main Breaker.

<sup>②</sup> Refer to pages 17, 18, and 19 for Box Style Number and Dimensions.

<sup>③</sup> Raintight panels are provided with hub closer plates.

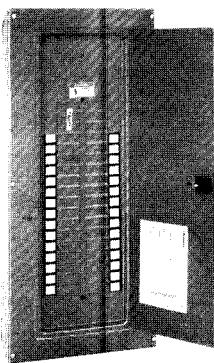

<sup>④</sup> Order HDK125 for Back Fed Main Hold Down if required.

<sup>⑤</sup> May be field converted to main breaker unit. Interior adjustability is standard.

① 125A Mod Line Base unit catalog numbers include Interior, Box and Cover only. Main Devices and accessories must be ordered separately for field installation. All Mod Line base units are listed as suitable for use as service entrance equipment when used as permitted by Article 384 of the NEC.

② Rainproof Base Units are furnished with a hub closer plate.

③ The max. rating of the panel is the main breaker rating when used as service entrance equipment.

④ 22,000 AIC rating is maintained when BR, BD, BQC 10,000 AIC branch breakers are used in conjunction with BRH and WFPH main breakers.

⑤ Hold down screw comes with load center not breaker.

⑥ Refer to pages 17, 18, and 19 for Box Style Number and Dimensions.

⑦ Available with Thru-Feed Lugs for both phase and neutral conductors.

⑧ Suffix "B" required when the word "Main" is stamped on handle, through 125 amp.

⑨ Remove suffix "A" for use with previous Type Load Centers made before 1991.

⑩ Order HDK125 for Back Fed Main Hold Down Kit if required.

⑪ Remove suffix "2" for use with previous Type Load Centers made before 1991.

### Product Description

Service entrance equipment that combines meter mounting and a circuit breaker distribution section in a rainproof enclosure. In addition to residential installations, Westinghouse meter-breakers are equally applicable for rural service entrance, mobile homes, and for temporary power on construction sites. They are Listed by Underwriters Laboratories Inc., File No. E52977.

Westinghouse meter sockets conform to UL Specification 414 and AEIC-EEI-NEMA standards (MSJ-7). Neutrals are factory bonded to the enclosure. These meter-breaker combinations fulfill EUSERC Utility requirements except as noted.

Plated aluminum bussing accepts the Westinghouse system of plug-on circuit breakers. Units are rated 10,000 AIC. Ground bars are available for field installation.

### Product Specifications

Ratings Single phase, 3 wire, 120/240 volts AC; 100 through 200 ampere main breaker and main lug types; 10,000 amperes RMS symmetrical short circuit rating.

### Features

- New interior accepts Westinghouse circuit breaker Types BR, BD and GFCB.
- Overhead or underground service.
- Meets latest NEC wire bending space requirements.
- Fifth jaw can be installed in the 3 o'clock or 9 o'clock position.
- Slotted sealing screws at hub with sealing position provided.
- Semi-flush nail flange.
- Meter mounting and underground pull sections are utility sealable.
- Meter socket ring landing will accept locking security rings.

- Surface units are supplied with mounting tabs.

- Molded bus supports assure rigid construction and security of bus bars.
- Flat dead front and sealable pull section contain captive screws.
- Lockable distribution cover. Dead front has a lifting handle.
- Raised distribution panel and increased wireway space speed installation and wiring of branch circuit breakers.

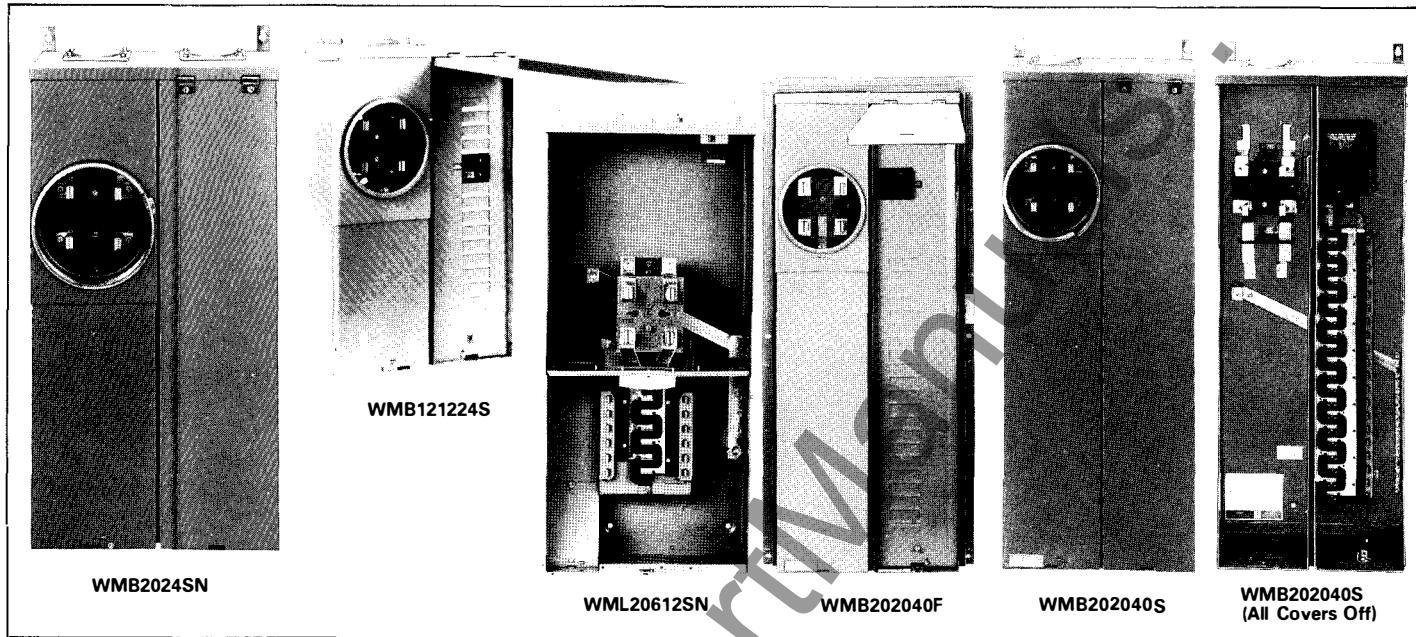

### 100 and 125 Ampere Devices

- Center feed main breaker highlights this all-new distribution section. Even distribution of load and cooler operating ambient increase component reliability.
- Compact enclosure is light in weight for easy installation.

① All 3-phase mains require 3-phased bussed stacks.

② For higher integrated ratings see series ratings on page 27.

③ Line side located on top of unit.

④ Main Service cubicles may be applied with either left or right hand Bus Tap sections as required by building layout.

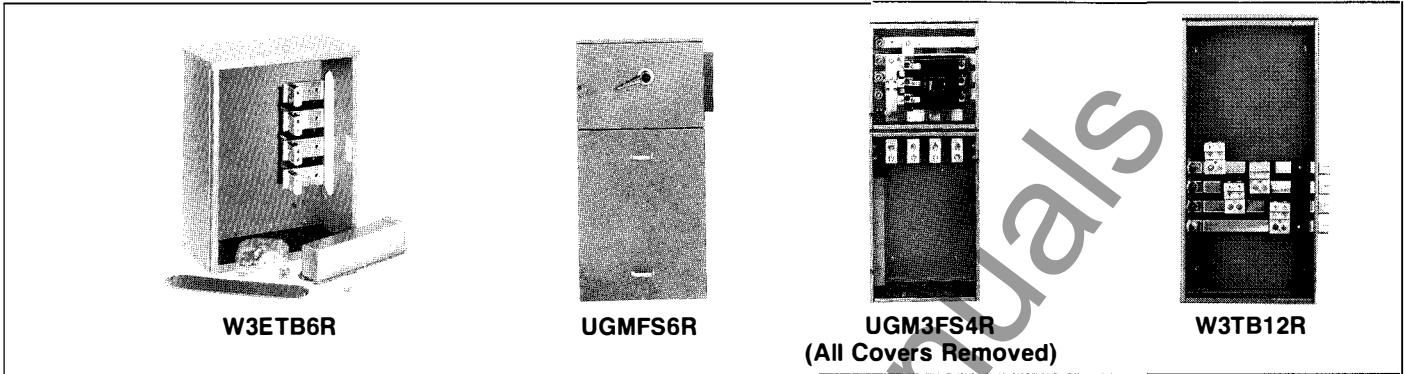

WM meter stacks may only be added to one side of the Fusible Switch. (side opposite the Bus Tap flange)

Bus link extensions are installed and hardware is packed with each unit.

The rear surface of the Main Service Cubicle aligns with the rear surface of the Bus Tap section.

## WM Modular Metering Features

Each unit is equipped with a wall mounting bracket, factory installed. The bracket engages the mounting channel, fastened to the wall. One man can easily lift unit and engage brackets. Unit is supported while permanent fasteners are installed.

Mounting channel bracket is fastened to the wall to support the meter module prior to installing the permanent fasteners. One bracket is supplied with each meter module. Mounting channel brackets interlock to form one continuous channel for mounting multiple units.

Horizontal bus is rated 800 amperes, standard, with 1200 ampere bus available on **special order**. Left side has captive bolts to aid in aligning adjacent units. Five holes around bus opening are for screws that help close opening and provide surface contact with adjacent units for grounding continuity.

The cover plate over the horizontal bus compartment is sealable.

Equipment grounding terminals provided as standard in all units. Located adjacent to bottom meter socket tenant main positions in all meter socket compartments.

Replacement meter socket assemblies are available  
125 Amp – Part No. 360-006-02  
200 Amp – Part No. 360-006-10  
Special Order Required

All unmetered conductors are barriered and inaccessible.

Installation instructions, horizontal bus attaching hardware, cover screws and necessary labels, and wall mounting bracket are supplied in a hardware package with each unit.

Meter socket is located directly above tenant main position for easy identification of individual apartments. Note slot in meter socket ring landing for manual bypass handle, and KO for manual bypass 10/32 sealing screw (not supplied).

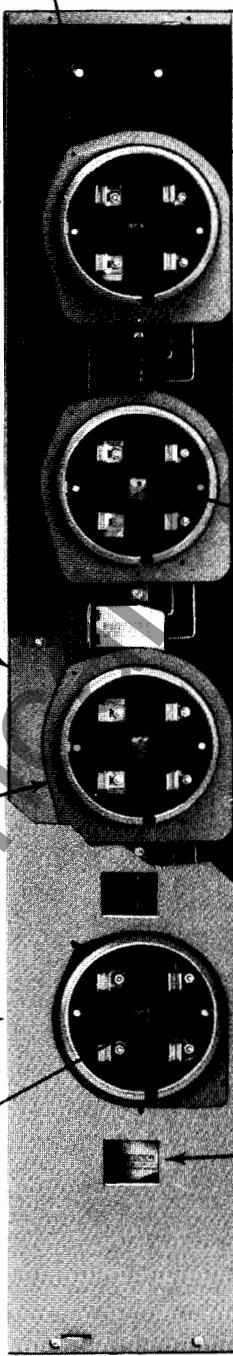

Plug-on circuit breakers facilitate installation of tenant main devices. Neutral load lug is just above tenant main position.

Potential (neutral connected) 5th jaw kit for use on 120/208 Y network services is factory installed in the 9 o'clock position on 3-Ø units. An accessory kit is available for use with 1-Ø units, or 6th jaw requirements on 3-Ø units.

Right side horizontal bus bars are extended and slotted to line up with left side bus of adjacent units. Gaskets around opening are provided on NEMA 3R units. Three bus bars (A, N, B) are provided on 1-Ø units; four (A, N, B, C) on 3-Ø units.

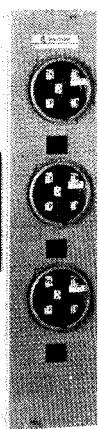

NEMA 3R devices have no-rust molded circuit breaker covers. Positive cover latching device can be padlocked for additional security.

Bottom endwalls can be removed for use as templates for "studding up." Indoor units have identical pattern in top end wall. Sealing brackets will accept utility seals or padlocks for security, if required.

<sup>①</sup> Order Tenant Breakers separately. See page 34.<sup>②</sup> 3 Phase 4 wire stacks are factory phase balanced and include 5th Jaw mounted in 9:00 position.<sup>③</sup> See phase balancing chart (page 36 to insure proper phasing of total line-up. (Required for 3-phase mains.)<sup>④</sup> Copper horizontal bus.<sup>⑤</sup> Refer to special breakers (page 34) when tenant mains are rated 100 amps or less.

**WM Modular Metering**

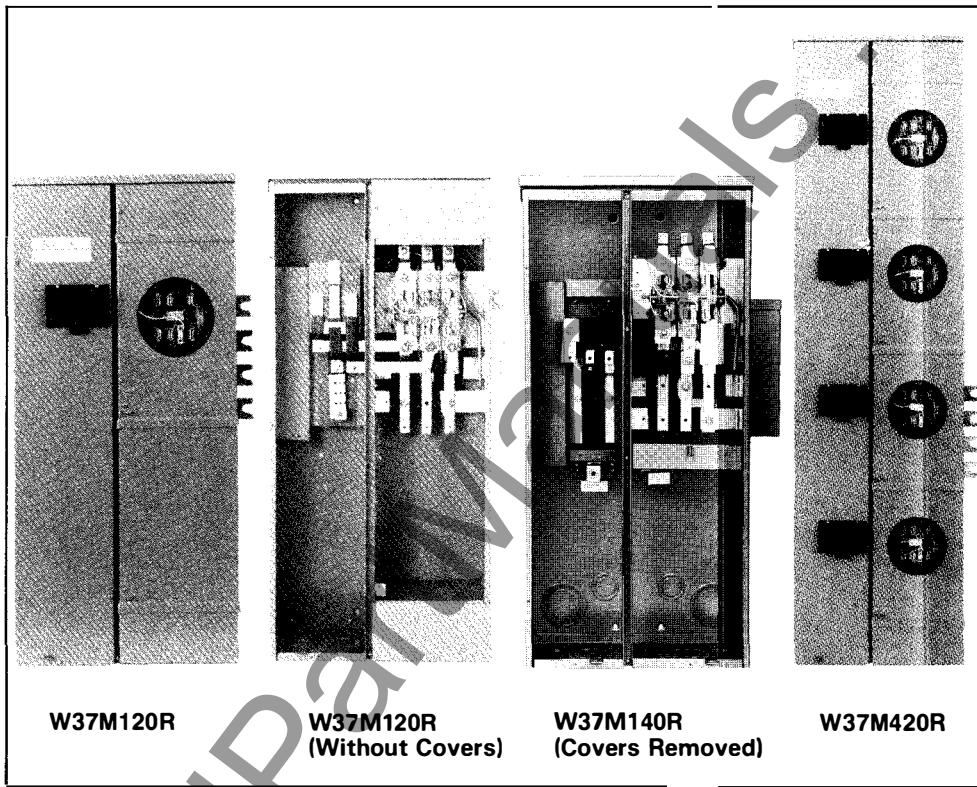

Commercial Meter Stacks with Lever By-Pass  
Ringless Type W35, W37

**Ratings**

- 120/208 Volts AC, 3 phase 4 wire; or 240 Volts AC, 3 phase, 3 wire Delta. Suitable for use on 120/240 Volts AC, 1 phase, 3 wire systems.
- 1200 ampere copper horizontal bus is standard.
- Sockets have 200 ampere continuous ratings and use Type WFP tenant mains.
- 10,000 AIC interrupting rating is standard.

**Features**

- 3 phase, 4 wire meter stacks with 7 jaw Duncan HQ7 and 1 phase, 3 wire with 5 jaw Duncan HQ5 meter sockets.
- 1, 2, 3 or 4 position stacks with 3-pole tenant mains, and 2 and 3 position stacks with 2-pole tenant mains.
- All devices suitable for indoor or outdoor use.
- All units connect to existing metering main devices (W3MB and W3MF series) and meter stacks with 3 phase horizontal bus series.
- All units UL Listed.
- Meter socket covers are ringless type. Each socket has a separate cover plate which is removable without disturbing other cover plates. Each cover plate has barrel lock and padlock provisions and is capable of being sealed with wire seals.
- A single cover plate covers all tenant mains and is removable without disturbing meter cover plates. Each tenant main circuit breaker handle is padlockable.
- All units can be bussed together with type W3M or WM stacks.

① 125A meter positions require BR type breakers. 250A meter positions require WFP or QCW type.

② Required for use on 200 amp rated meter position, when tenant mains are rated below 100 amps.

### ACCESSORIES

Description	Catalog Number	Photographs of various WM accessories: W3MCSR, TXR, TXL, WSSKR, WLHCP, WRHCP, WTSR, WSR, WCP, WM5J, WM5JOP, WMBP, WGBK2, and W37CB125 (Installed).
<b>Corner Section</b> 800A, 1Ø, 3W, or 3Ø, 4W; Indoor or Outdoor; For Use on Facing Surfaces of Adjacent Walls; 16" High, 13 $\frac{1}{16}$ " from Modules to Corner of Room	W3MCSR	
<b>Transition Section</b> ③ 1200 Amp, 3Ø, 4 Wire – Capable of Matching Horizontal Bus Bars of Previous Design (QS, QSC) with those of new WM Design. (Retrofit) (6" Wide) Right Hand (3-Phase) Left Hand (3-Phase) Single Phase: Right Hand Left Hand	TXR TXL TXR1 TXL1	
<b>Spacer</b> Used to Increase Clearance Between Meter Modules and Main Device (6" Wide)	WSSKR	
<b>Closure Plates:</b> (Utility Sealable) Left End Right End	WLHCP WRHCP	
<b>Sealing Rings:</b> Screw Type Snap Type Stainless Steel	WTSR WSR STSR1	
Filler Plate, 125A Max. Breaker Position Filler Plate, 150-200A Breaker Position 5th Jaw (Potential), 3, 6 or 9 O'clock Position 5th Jaw (Isolated), For Off-Peak Metering Plastic Cover Plate Ringless Style Metal Cover Plate Manual By-Pass Kit Horn Type Manual By-Pass	WFP1C, FP1 WFP3Q WM5J WM5JOP WCP WCPRL WMBP WMBPH	
Ground and Bonding Kit for W3TB8R Ground and Bonding Kit for W3TB6R	WGBK1 WGBK2	
<b>Commercial Metering Only</b>		
2 Pole Tenant Main Conversion Kit 3 Pole Tenant Main Conversion Kit WFP to BR 100A Max. Meter Opening Blank-Off Kit	W35CB125 W37CB125 W37CP	
Totalizing Jumper Kit (Field Installed) Meter Barrier Kit (Field Installed)	W37JK W37BK	

③ QS on left – WM on right, use TXR, TXR1.  
QS on right – WM on left, use TXL, TXL1.

Full range of replacement parts are available through Catalog 30-390.

## WM Modular Metering

### Dimensions, Knockouts, Module Phasing

WM Meter Modules — 125 and 200 Ampere Positions

#### 125 Ampere Positions

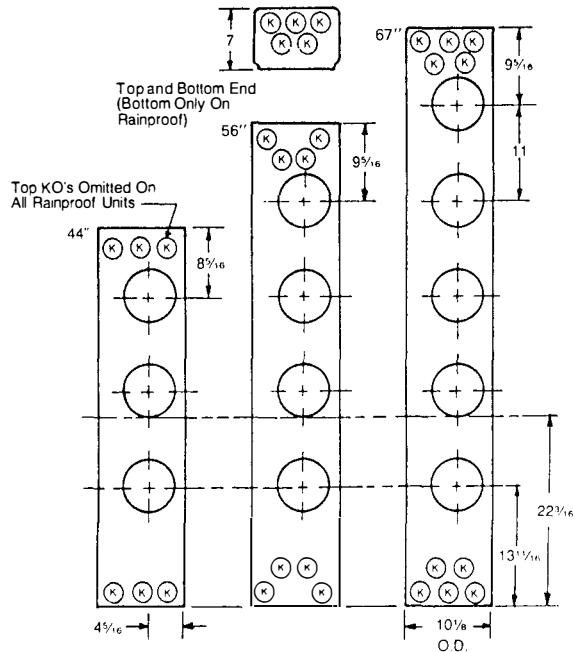

Figure 8

Figure 9

Figure 10

#### Knockout Codes

Code	Conduit Size - Inches
K	1-1/4-1-1/2
P	1-1/2-2-2-1/2

#### 200 Ampere Positions

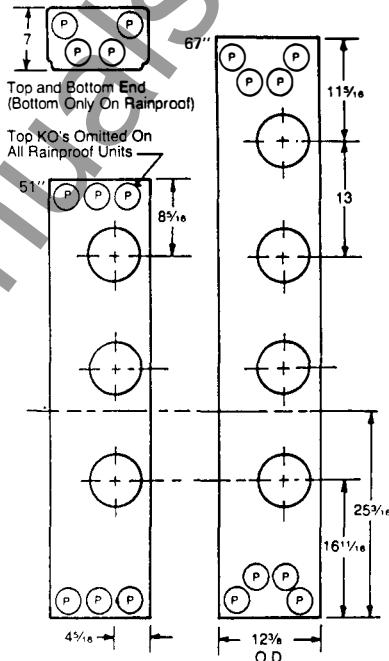

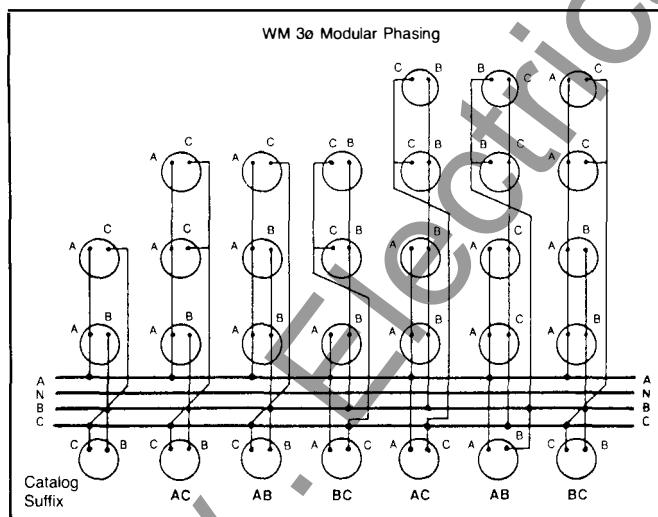

Figure 11

Figure 12

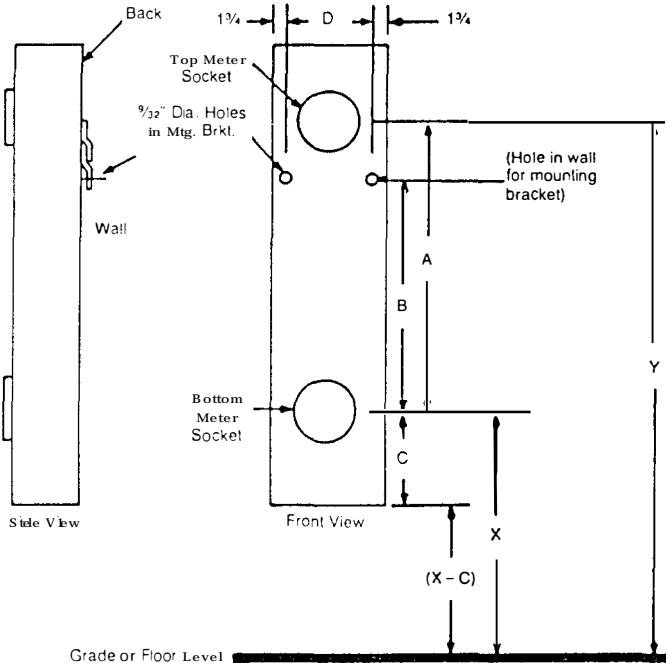

#### 3 Phase Module Phasing – 3-Phase In, 1-Phase Out<sup>①</sup>

<sup>①</sup> Select the proper catalog in order to obtain an equal number of meter positions connected to each of the (3) possible combinations (Ex. AB, BC, AC). Phasing of each stack cannot be changed in the field.

Note: Not for Construction Purposes.

#### WM Meter Stacks

X = Utility minimum acceptable dimension in inches from grade or floor level to the center line of the bottom meter socket position.

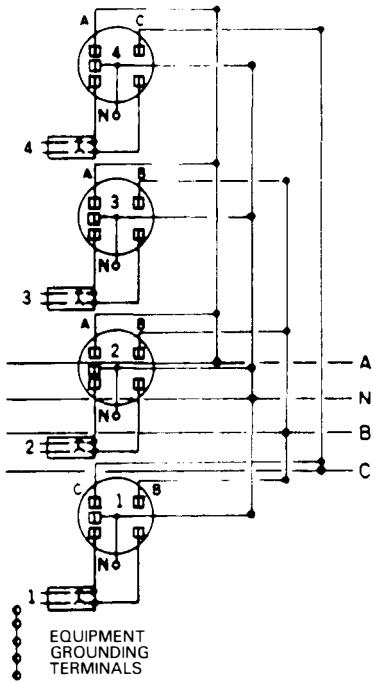

Y = Utility maximum acceptable dimension in inches from grade or floor level to the center line of the top meter socket position.

### BPA Procedures

The branch price authorization (BPA) is an authorized deviation from published discounts to meet specific competitive situations at a given distributor location. The BPA form is used not only to satisfy the legal requirements affecting the sale of Westinghouse CPD products to our customer, but to provide an accurate, efficient means of managing our distributor price agreements. All authorized BPA discount multipliers are loaded in Westinghouse AMS data base and automatically price each catalog item at the time of order entry.

Primary BPA discount groups (L,C,G,S,E) apply to all catalog items within their respective groups; however, sub-group discounts (LA,LB, etc) will take precedence over the primary group, while a catalog exception will override both primary and subgroups. In other words, the computer system will, upon order entry, search for the lowest authorized level for each catalog item, and price it accordingly.

### Instructions

#### Field Sales Request

- Provide complete information required by BPA form. (Form 49808)
- Request discount multipliers required to meet competition.
- Obtain District Manager approval & signature.
- Fax or mail completed BPA form to the Distribution Support Center.

#### Support Center Authorization

- Review, negotiate and authorize BPA request.
- Enter product code authorizations on AMS data base.
- Fax approved BPA to Field Sales.
- Maintain on file approved and signed forms for internal audit.

#### Field Sales Confirmation

- Add authorized BPA discount group multipliers to the BPA discount tables provided on CPD price lists: 30-125 and 30-325 as required.
- Transmit the price lists to the distributor acknowledging and confirming the approved levels that have been secured for him.

## SPECIFICATIONS, LISTINGS

### CLASS CTL

National Electrical Code Paragraph 384-15 requires branch circuit load centers to be provided with physical means to prevent the installation of more over-current devices than that number for which the enclosure was designed, rated, and approved. Class CTL Duplex and Quadplex breakers (identified by a catalog number prefix BD or BQ) are equipped with a UL listed rejection tab over the line terminal. All load center enclosures have appropriately notched stabs to accept these rejection tab Class CTL breakers.

Duplex and Quadplex breakers manufactured without the rejection tab (identified by a catalog number prefix BR or BRD) are available for replacement purposes in older enclosures.

### FEDERAL SPECIFICATIONS

All load center enclosures meet Federal Specifications W-P-115a, Type 1, Class 2 requirements.

All 1 pole and 2 pole 120/240 volt breakers, both 1" and 1/2" per pole meet the requirements of Federal Specifications W-C-375a Class 1a

All 2 pole and 3 pole 240 volt breakers meet Federal Specification W-C-375a Class 1b.

### CANADIAN STANDARDS ASSOCIATION LISTING

All 1 pole and 2 pole 120/240 volt breakers, both 1" and 1/2" per pole, 225 ampere maximum, are listed as Certified by the Canadian Standards Association, Guide No. 69-11-19, Class 1432, File 18328.

All 1-pole GFCB® Ground Fault Circuit Breakers with suffix CS are listed as certified by the Canadian Standards Association, Guide No. 142-R-3, Class 1451, File 33607.

### SERVICE ENTRANCE

All split bus, main breaker, and unit enclosures, and all main lug enclosures thru 12 circuit single phase and 18 circuit three phase are listed as suitable for use as Service Equipment when installed in accordance with NEC-230. Meter socket units are listed as Service Equipment.

### UNDERWRITERS' LABORATORIES INC. LISTING

All load centers comply with the Underwriters' Laboratories Inc. standards and are listed as follows:

"Standard for Panelboards" UL67; Guide No. 320 BO File E31679.

"Standards for Cabinets and Boxes" UL50; Guide No. 60 A19 File E34724.

"Requirements for Wire Connectors and Soldering Lugs", UL486; Guide No. 461 10-C File E7830.

"Requirements for Service Equipment", UL869; Guide No. 380 FO File E11737.

All MLK series lug kits comply with Underwriters' Laboratories Inc. standards and are listed under Guide No. DHJR, File E31424, Volume W, Section 17.

All grounding bars manufactured comply with Underwriters' Laboratories, Inc. standards and are listed under Guide No. DHJR, File E31424, Volume W, Section 17.

All circuit breakers 15 amperes and larger comply with the Underwriters' Laboratories Inc. "Standard for Branch Circuit and Service Circuit-Breakers" UL489; Guide No. 60 10.2 File E31424, and "Requirements for Wire Connectors and Soldering Lugs", UL486; Guide No. 461 10-C File E7830.

All Bryant breakers and load centers where marked, are suitable for use with 60/75°C rated wire.

All devices comply with the 22,000 A.I.C. — 10,000 A.I.C. U.L. series connected components File DKSY2 of the Recognized Components Index.

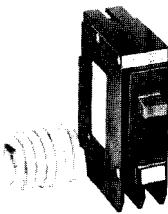

## BR CIRCUIT BREAKERS

Bryant BR plug-on breakers in the standard 1" per pole package have color-coded handles for easy ampacity identification and unique color-coded cases that indicate UL listed 10KA or 22KA interrupting ratings.

All are Type I.C. (interchangeable) devices; several ratings are SWD and HACR approved. Typical ampacity range for BR breakers is 15-125 amperes.

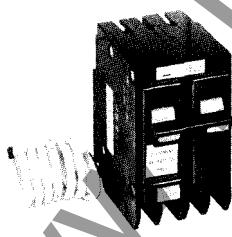

## GFCB® BREAKERS

Bryant GFCB (ground fault circuit breaker) combines state-of-the-art hybrid electronic technology with a circuit breaker mechanism in a compact 1" package. The GFCB automatically senses hot wire-

to-ground faults in a 4 to 6 milliampere range, and shuts off the power thus providing an extra margin of safety beyond that of conventional circuit breakers. GFCB applications include bathrooms, cellar outlets, swimming pools, outdoor branch circuits, and kitchen branch circuits. Available in UL listed 120 and 120/240V ratings. Bryant also offers non-UL listed ground fault breakers for international applications as well as ground fault devices for equipment protection.

## EQUIPMENT PROTECTION BREAKERS

This device is similar to the Bryant GFCB, except that it is designed to protect equipment (not people) against damage from arcing ground faults. It is available with a 30MA trip level. Applications include infrared

heating equipment, computer equipment, process control equipment etc. Special markings and color-coding immediately differentiate it from a GFCB breaker.

## BJ CIRCUIT BREAKERS

Available in 125 thru 225 ampere frames, Bryant BJ plug-on breakers have 10KA and 22KA interrupting ratings and can be used as main or branch disconnect devices. Color-coded handles identify ampacity ratings.

Large extruded aluminum box lugs, complies with UL 486B, provide cool operation. Tripping mechanism has thermal and magnetic protection for long-life performance. Rupture gas is safely vented into box gutter.

## BD CIRCUIT BREAKERS

BD plug-on breakers have the same construction as Bryant BR 1" per pole devices except that 2 poles are in a space-saving 1" package. UL listed interrupting rating is 10KA. Color-coded handles identify ampacity rating through 50 amperes. Some ratings are SWD and HACR approved. Exclusive CTL rejection feature allows only 42 circuits in the panel in compliance with NEC Article 384-15.

## BQ CIRCUIT BREAKERS

Quadplex® construction of Bryant BQ plug-on breakers incorporates two duplex breakers assembled together to provide various combinations of 2 pole and single pole devices in a 2" package, and allow compliance with

NEC Article 240-20(b). The 2 pole combinations of Bryant BQ breakers are marked "independent trip" meaning that each pole of a 2 pole device trips independently of the other, but may be actuated jointly by means of the handle tie. Independent trip devices may only be used on 3 wire Edison circuits where the neutral is present.

## Circuit Breaker Types Thermal Magnetic 40°C

## BQC CIRCUIT BREAKERS

Quadplex construction of Bryant BQC plug-on breakers incorporates a special internal common trip cam. BQC breakers are available in several combinations of 2 pole and single pole devices wherein the 2 pole

circuits have an internal common trip mechanism. These breakers are labeled "common trip" and meet all the requirements of UL 489 paragraph 9.1 requiring multipole breakers to have common trip. Common trip breakers are required on all 240V circuits where there is no neutral present such as water heaters, baseboard heat, air conditioners and other motorloads.

## SPECIAL APPLICATION BREAKERS

As the name implies, these devices are designed for special applications as required by the National Electrical Code.

**Water Heater Breaker:** Some watthour meters incorporate rate register switches

used in conjunction with off-peak rates. Water Heater breakers do not derive their circuit from the loadcenter stab. The line & load side of the breaker are fed to terminals on the breaker. Except for these terminations, the device offers normal circuit breaker protection.

**Switching Neutral Breaker:** Primary application for the Bryant switching neutral breaker is for protection of process equipment such as gas pumps that utilize flammable liquids. Non-automatic pole breaks the neutral power leg, minimizing the danger of arc conditions.

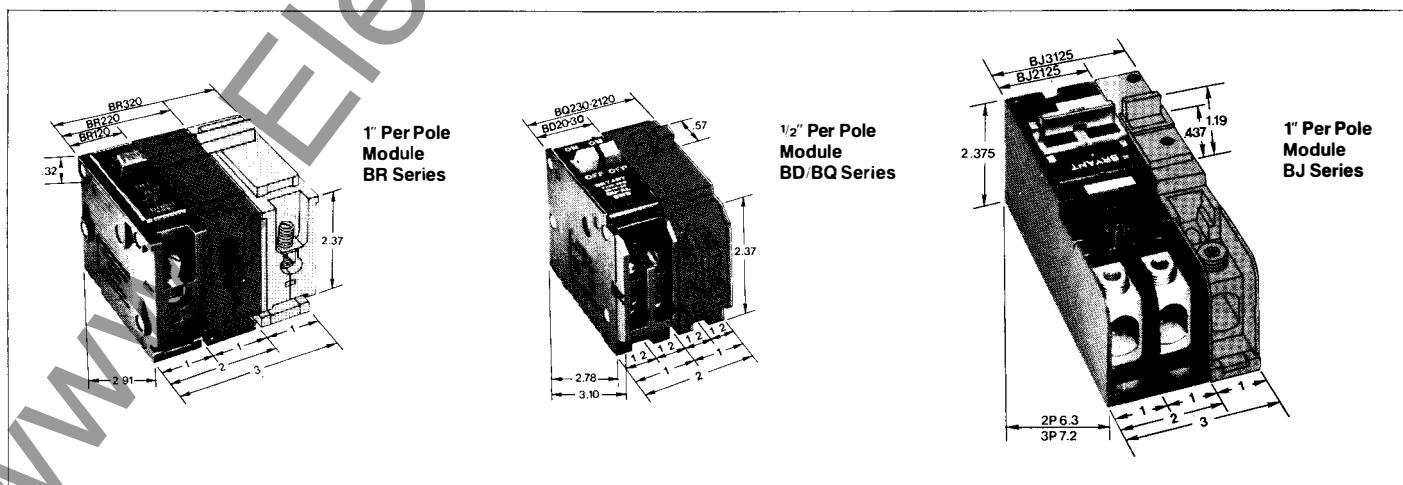

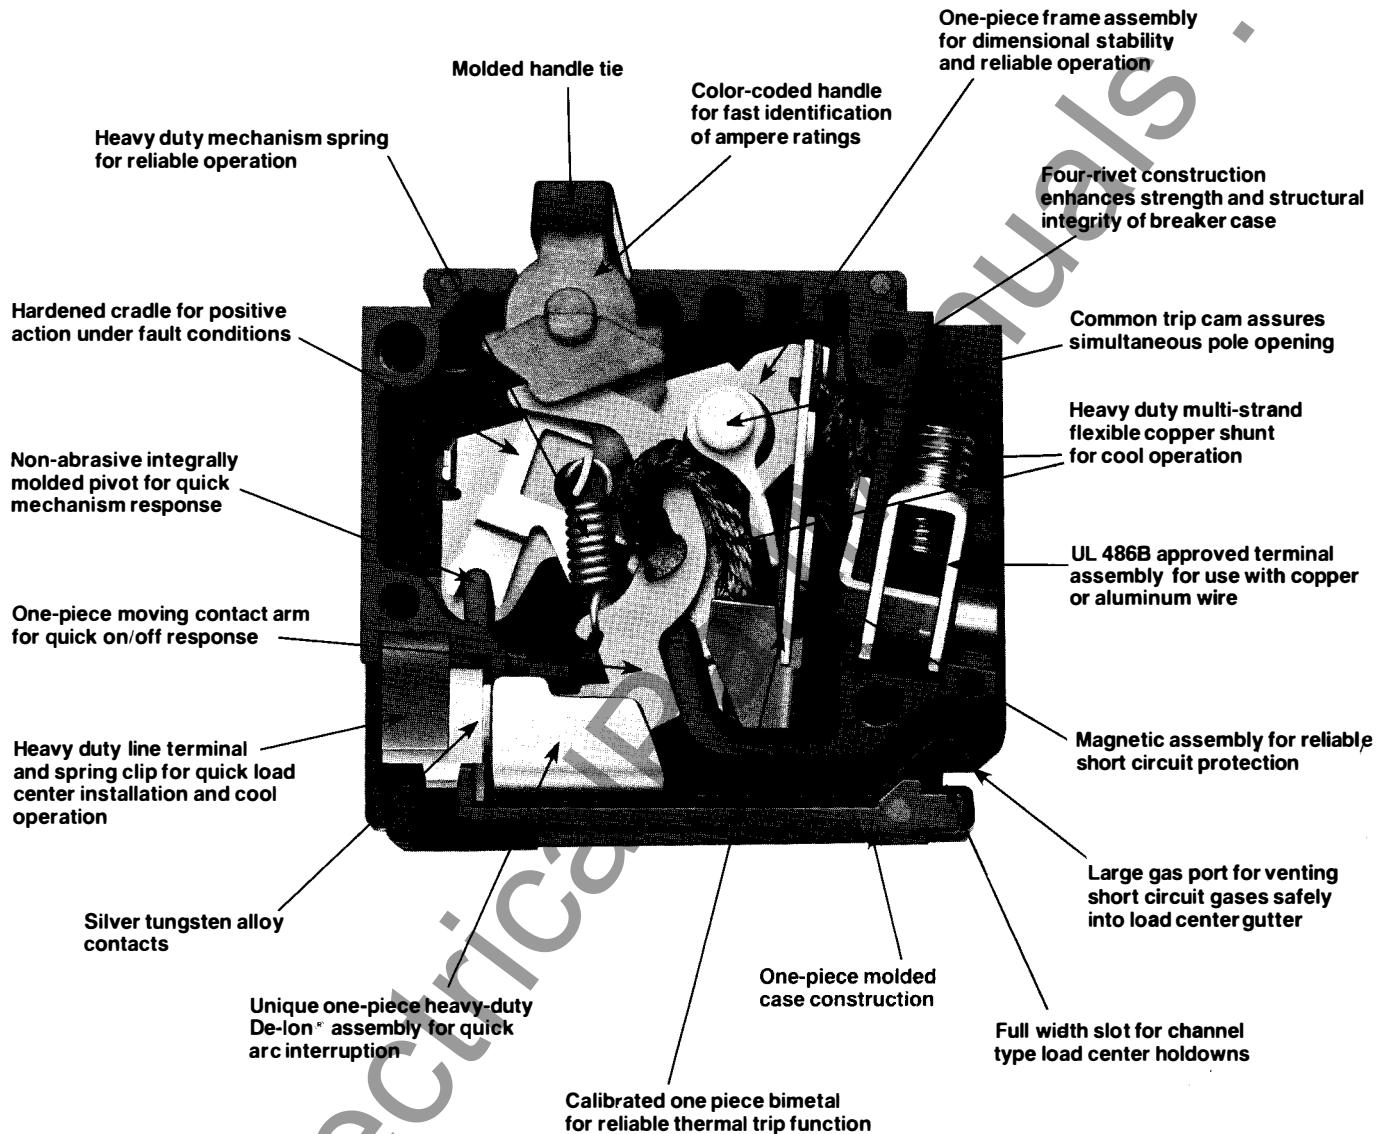

**2-Pole Breakers 120V or More to Ground:** Used on Delta distribution systems, these Bryant breakers are applied on phase legs where voltage to ground is above 120V.

**Non-Automatic Molded Case Switch:** Identical to comparable circuit breaker frames with this exception: non-automatic molded case switches do not have thermal or magnetic trip elements.

## Circuit Breaker Accessories and Wire Ranges

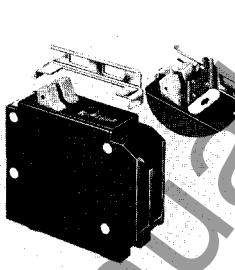

BRQLW

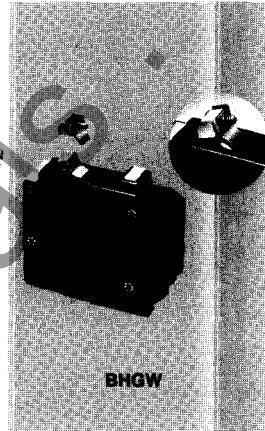

HLW

BHLW

BRLW

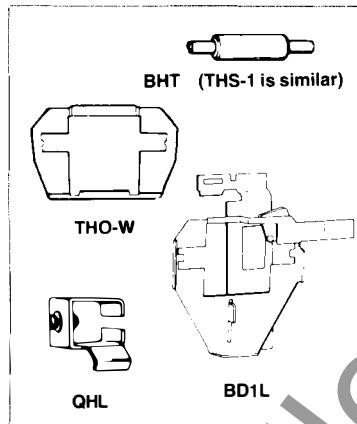

BHGW

### LOCKDOGS AND PADLOCK DEVICES

Three newly designed accessories provide positive, tamper-proof performance for circuit breakers installed in commercial, high-traffic and generally accessible areas. The **BHLW** and **HLW** lockdogs, the **BRLW** and **BRQLW** padlock devices are designed to hold the circuit breaker operating handle in the "ON" or "OFF" position. Protects critical operating circuits from unauthorized tampering or use. The load center cover holds these devices securely in place. Lockdogs and padlock devices do not defeat the trip function of the circuit breaker. (Padlock not supplied). Lockdog device can be reversed for "ON" or "OFF" handle position.

### BASIC INSTALLATION INSTRUCTIONS:

1. Install and wire circuit breakers in accordance with N.E.C. and local codes.
2. Install **HLW**, **BHLW**, **BHGW**, **BRLW**, or **BRQLW** according to instructions with each item. **HLW** has break-off tabs that provide independent operation of inner or outer handles.
3. Punch-out appropriate "shingles" for circuit breaker handles in load center cover.
4. Secure cover to load center with cover screws. Items are now in place and cannot be removed.
5. For padlock devices, turn circuit breaker handle to the "on" or "off" position and install padlock.

ITEM	DESCRIPTION	CAT. NO.	CAR-TON	STD PKG.
HANDLE TIE	for adjacent poles of two Duplex breakers. SIMUL-TIE <sup>®</sup> for outside poles of two Duplex breakers. for two of BR (1" per pole) breakers.	THS-1 THO-W BHT	5 1 5	50 30 50
LOCKDOG	for BD Duplex, and BQ Quadplex <sup>®</sup> water heater, and switching neutral breakers. Snap-on. for BR (1" per pole) BD Duplex and QP style breakers. for BRH 3p for single pole GFCB and GFEP breakers.	HLW BHLW QHL BHGW	10 1 1 1	100 25 10 25

## QSC Lever Bypass Meter Center Features

Solid barrier separates line and load wiring. Tenants have access to circuit compartments only after installation is complete and meter compartment is sealed.

**Breaker Provisions:** Mounting provisions are provided for either 100A BR or 200A BJ plug on breakers 240V available in 10000 AIC or 22000 AIC ratings: All breaker mounting plates will accept standard main breaker hold down screws required by the NEC.

**Circuit Breaker Compartment:** Totally isolated from meter socket compartment with full width wire pulling access at top and bottom of section.

7 jaw sockets are factory connected for proper phase balance.

**Systems Ratings:** UL listed for applying on systems capable of delivering up to 100,000 RMS symmetrical amperes maximum short circuit current when applied with the appropriate QS main breaker or main fusible unit.

Indoor trim includes padlock tab for each breaker. Outdoor trim includes padlockable gasketed lexan breaker covers.

Quick fastener screws assure quick fastening of all covers

**Ground Bus Provisions:** Enclosure is pre-drilled for standard Ground Bus assemblies to be added at the bottom of each enclosure.

**Knockouts:** Large 2 $\frac{1}{2}$ " x 3" x 3 $\frac{1}{2}$ " Concentric Ring knockouts located in bottom end wall and in bottom rear of enclosure.

**Indoor Enclosure:** Individual ringless meter cover with provisions for a sealing wire on each cover plus a padlock tab for each cover which will accept a standard Utility pin-lock padlock device.

Top end wall in outdoor enclosures are furnished with R1H type hub closer plates.

**Meter Socket:** Standard Duncan 5 Jaw HQ5SB and 7 Jaw HQ7 lever bypass socket assemblies with jaw release rated 200A continuous duty.

Raised mounting pads are provided for securing QSC Units to uneven surfaces

**Wall Mounting Hardware:** Box hanger is factory installed and matching wall bracket is supplied.

**Horizontal Bus Bars:** 800A 4WSN main horizontal bus assemblies with single bolt bus connection per phase bar and Captive Belleville-type positive pressure washers. Standard 800A Bus configuration compatible with any of the QS family of main cubicles and QS stacks.

Rainproof units have neoprene gaskets encircling the bus bars which assures a rainproof seal between main cubicles and QSC meter sections. Rainproof units are constructed of galvanized steel for added resistance to corrosion

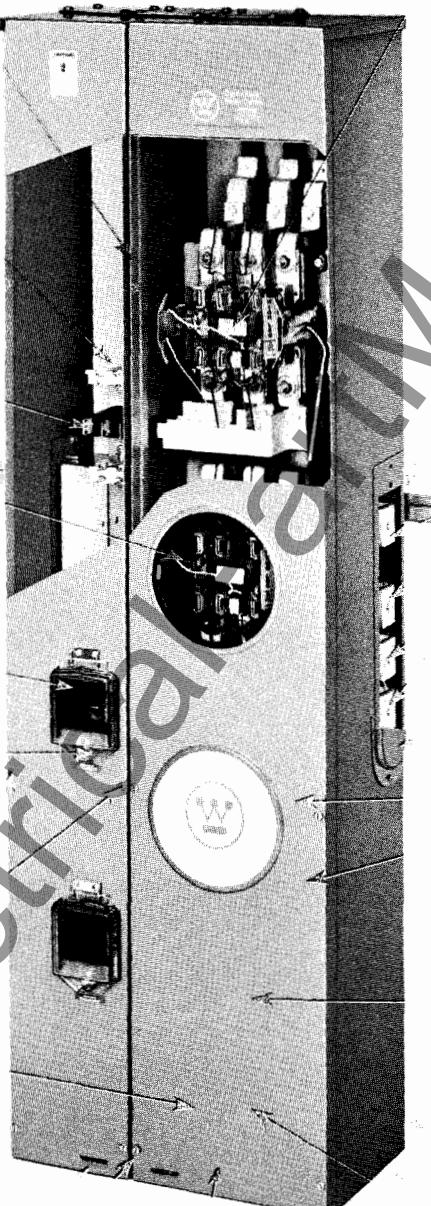

**Outdoor Enclosure:** Raintite high security ringless single cover design with sealing wire lances, padlock tab and provisions for mounting one or two standard utility pin-type barrel locks. Single cover assures security and prevents moisture for seeping into live socket compartment.

All QSC units have a seven stage, heavy duty, iron phosphate base undercoat and medium gray, ANSI 49 baked enamel finish

Large 2 $\frac{1}{2}$ " x 3" x 1/2" Concentric Ring knockouts located in the bottom rear of both indoor and outdoor enclosures. Indoor enclosures include knockouts in top and bottom endwalls. Outdoor enclosures include knockouts in bottom endwalls.

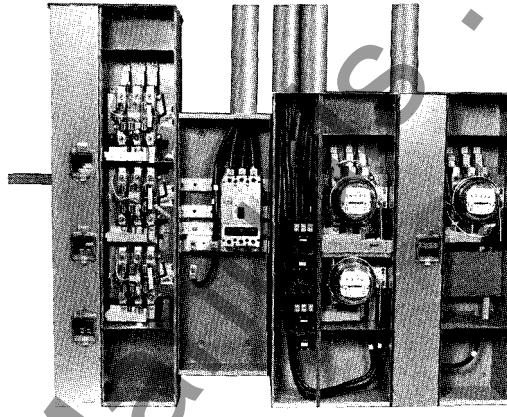

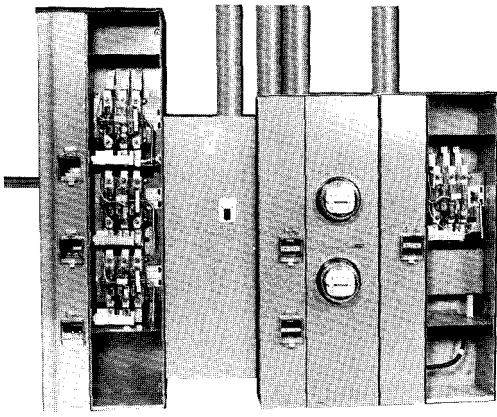

**Barrel Lock Mounting Hardware:** Single bolt mounting kit available for utility application requiring barrel-lock security. Cover marked with (+) location for drilling access hole for barrel lock, both on individual indoor covers and in 2 locations on the single outdoor cover.

**Neutral Terminals:** Conveniently located at bottom of section to minimize crowding in wireway, and ease of installation.

**QSC Lever Bypass Meter Centers with Jaw Release**

## Meter Center Accessories and System Short Circuit Rating Table

### SPACER KIT

CAT. NO.	DESCRIPTION
QSSKR	For additional clearance between service cubicle and right-hand mounted meter socket-breaker sections. NEMA-3R.

### CLASS R FUSE KIT FOR MF FUSIBLE SWITCH SERVICE CUBICLES

CAT. NO.	DESCRIPTION
RFK666	Adapts 400 and 600 Amp Fusible Switch Cubicles to accept only Class R Fuses.

### MAIN TERMINAL EQUIPMENT GROUND LUG

CAT. NO.	DESCRIPTION
MLGK	(includes bonding strap.)

### SEALING RINGS

CAT. NO.	DESCRIPTION
SR1	Snap Type Aluminum
SBR1	Bolt Type Aluminum
STSR1	Toggle Latch Stainless Steel

### HUBS

CAT. NO.	HUB SIZE
R1H200	2
R1H250	2 1/2"
R1H300	3

### CLASS "T" ADAPTER KITS FOR MF FUSIBLE SWITCH SERVICE CUBICLES

RATING	1 PHASE CAT. NO.	3 PHASE CAT. NO.	DESCRIPTION
400A	FDP4T	3FDP4T	
600A	FDP6T	3FDP6T	
800A	FDP8T	3FDP8T	Converts MF, M3F, Fusible to Accept Class T Fuses
1200A	FDP12T	3FDP12T	

### SYSTEM SHORT CIRCUIT RATING:

Use this table to select the right combination of metering equipment to meet the available fault current AIC requirements. The complete meter center assembly rating applies only with main and branch devices listed on the

### CORNER SECTION

CAT. NO.	DESCRIPTION	CAR-TON	STD. PKG.
QSCS	QS Corner Section provides additional clearance between cubicle and stack units in corner installations. Corner to corner 14"	1	1

### 5TH AND 6TH JAW KIT

CAT. NO.	DESCRIPTION	CAR-TON	STD. PKG.
MM5JK	For Meter Centers (QP, QS) and UB, OB, UP. For use with 200 Amp. max. 3 and/or 9 o'clock positions	1	5

### MANUAL BY-PASS KIT

CAT. NO.	DESCRIPTION	CAR-TON	STD. PKG.
MBPN	For QP and QS units only—200 Amp. max. For factory installation add \$2.00 list each	1	10

### GROUND BAR KITS FOR QS STACKS (See pg. 18 for wire size)

CAT. NO.	NO. OF TERMINALS
GB3	3
GB3A	3
GB6A	6
GB6	6

① QP Meter Centers have ground terminals included with neutral terminations in each breaker compartment

### BARREL LOCK MOUNTING KIT

CAT. NO.	DESCRIPTION
BLK	For QSC Lever Bypass Meter Centers

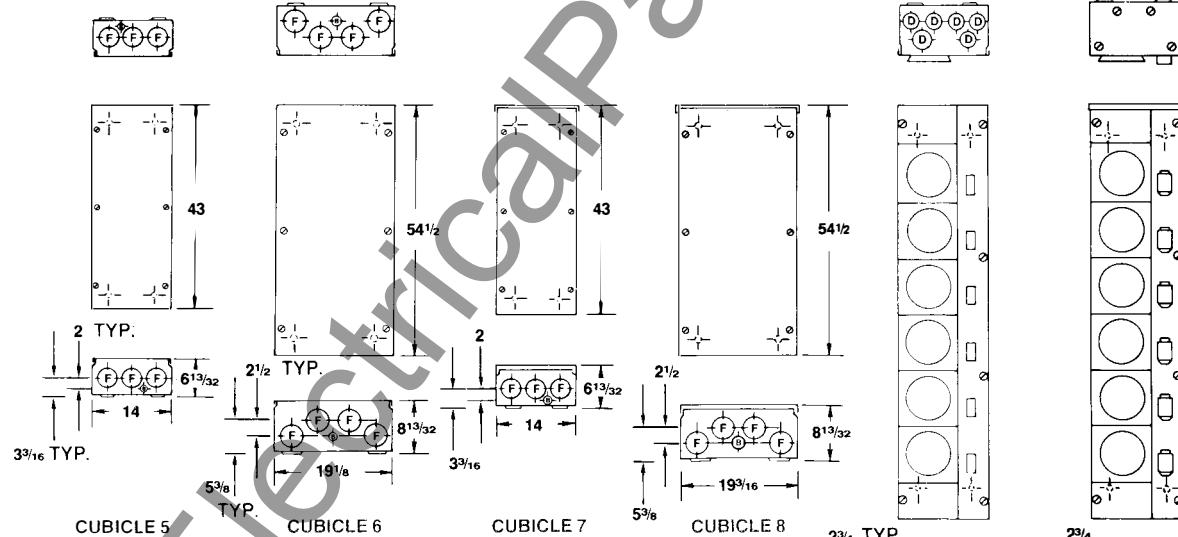

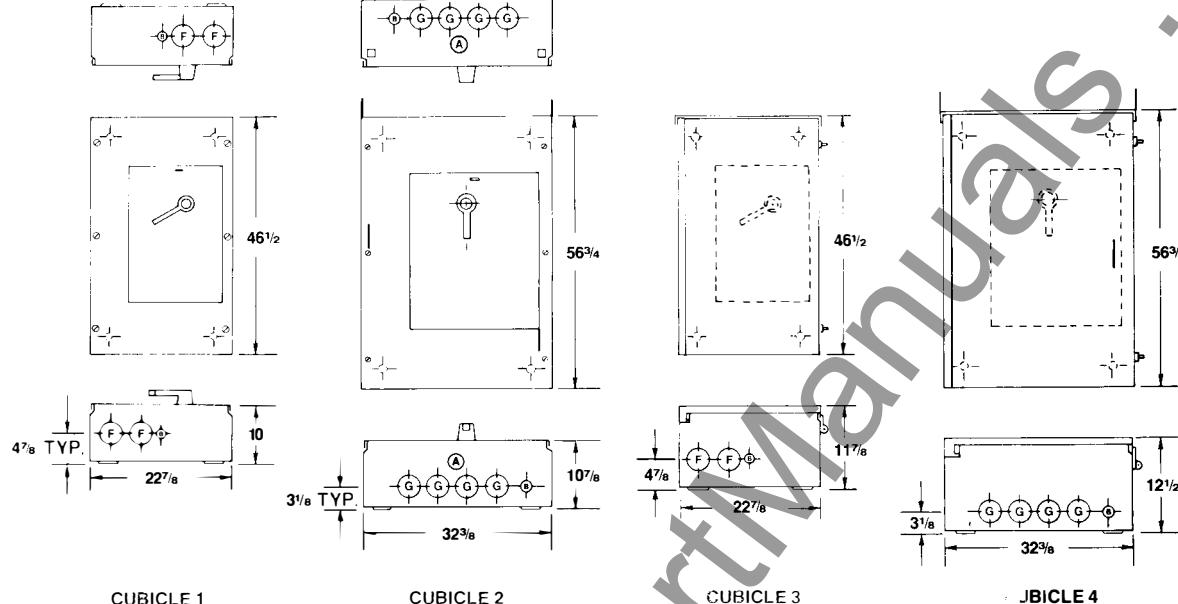

wiring diagram. All series-combination ratings have been extensively tested at the Westinghouse High-Power Test Lab, and are listed by U.L. for the amperage interrupting capacities shown.

Available Fault Current At Line Terminals of Assembly - RMS Symmetrical Amps (240 VAC Max.)	Main Service Cubicle - Minimum Braker Frame Size Required	QS Stack - Tenant Main Breaker Required	Load Centers - Branch Breaker Required	Complete Meter Center Assembly Short Circuit Rating - RMS Symmetrical Amps @ 240VAC Max.
To 10,000 A.	All standard MB, MF	BR, BJ	BR, BD, BQ	10,000 AIC
10,001 to 22,000 A.	All standard MB, MF or ML Cubicles except the MB2 series, which requires BJH2200 (special)	BRH, BJH except when used with MB2 series with BJH2200; then BR, BJ	BR, BD, BQ	22,000 AIC
22,001 to 42,000 A.	MB units with LA, LBB, MA, NB and PB Frame Breakers. All MF Units	BRH, BJH	BR, BD, BQ	42,000 AIC
22,001 to 65,000 A.	MB4 units with DK Series C breaker.	BRH, BJH	BRD, BD, BQ	65,000 AIC
42,001 to 65,000 A.	MB units with special HLA, HMA, HNB and standard PB Frame breakers.	BRH (100 Ampere Max).	BR, BD, BQ	65,000 AIC
42,001 to 100,000 A.	All MF Units			
MF units with Class T fuse and FDPT Adapter Kit	BRH, BJH	BR, BD, BQ	100,000 AIC	
65,001 to 200,000 A.	MB units with LCL frame breakers 400A max.	BRH, BJH	BR, BD, BQ	200,000 AIC
To 10,000 A 10,001 to 22,000 A 22,001 to 42,000 A	N/A	QP Meter Center Tenant Main Breaker	BR, BD, BQ	10,000A 22,000 A 42,000 A

All devices comply with the 22,000 AIC-10,000 AIC U.L. Series Connected Components file DKSY2 of the Recognized Components Index.

## Quick-Stack Meter Center and Service Cubicle Dimensions and Knockout Locations

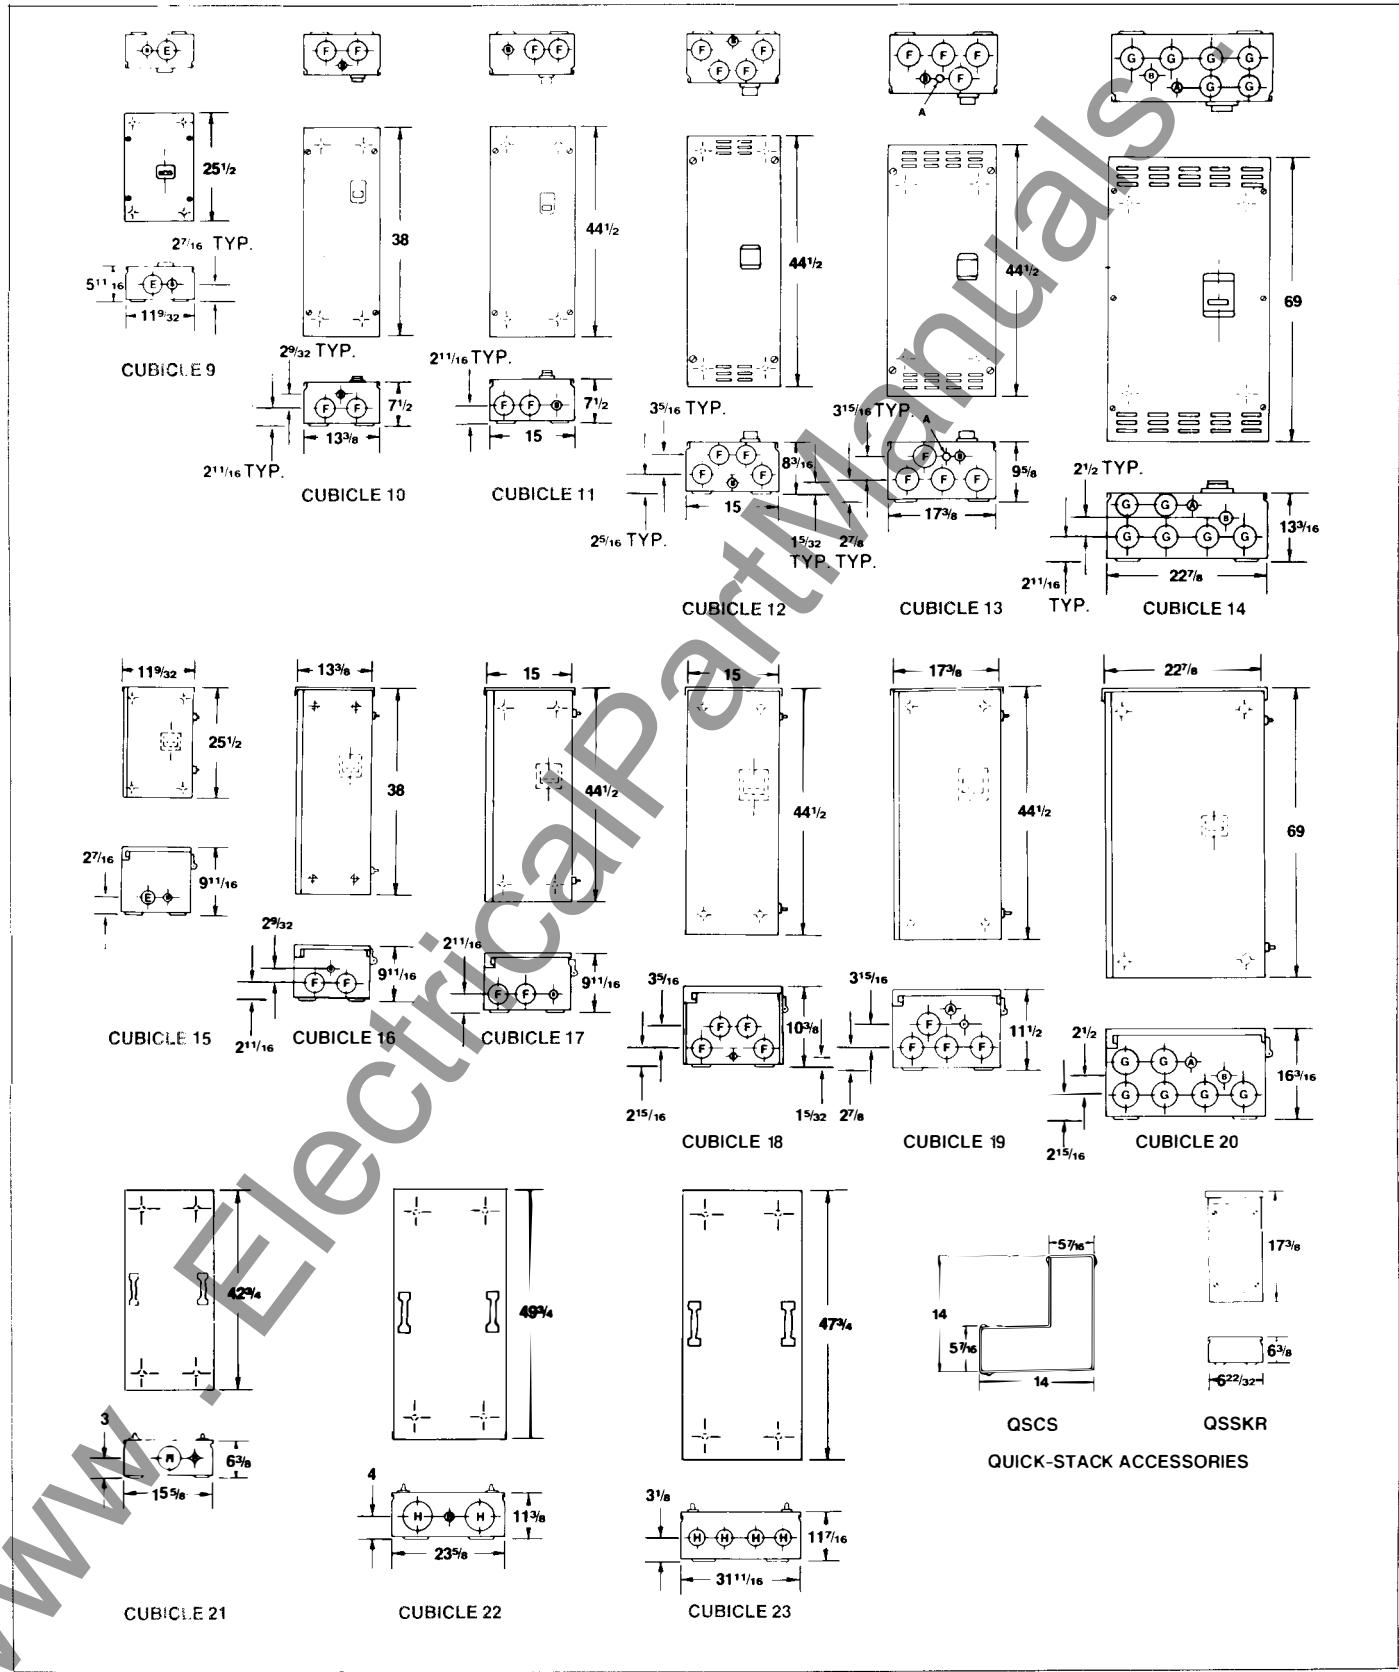

NO. OF METER POSITION	INDOOR NEMA 1 RAINPROOF NEMA 3R		
	WIDTH	HEIGHT	DEPTH
2	12½"	29¼"	6¾"
3	12½"	38¼"	6¾"
4	12½"	47¼"	6¾"
5	12½"	56¼"	6¾"
6	12½"	65¼"	6¾"

Top and Bottom are typical of all QS stack units.

## QSC Lever Bypass Meter Center Schematics and Phase Balancing Data

### SELECTION AND APPLICATION FOR PHASE BALANCING QSC METER STACKS

QSC stack selection for application of 5jaw single phase sockets on single phase 3wire and 3phase 4wire services.

QSC 5jaw socketstacks are factory-bussed and connected to the main cross-bus. By selecting the proper combination of stacks, the complete meter center will be properly balanced, distributing the individual metered loads evenly on the service bus. Selection is as follows:

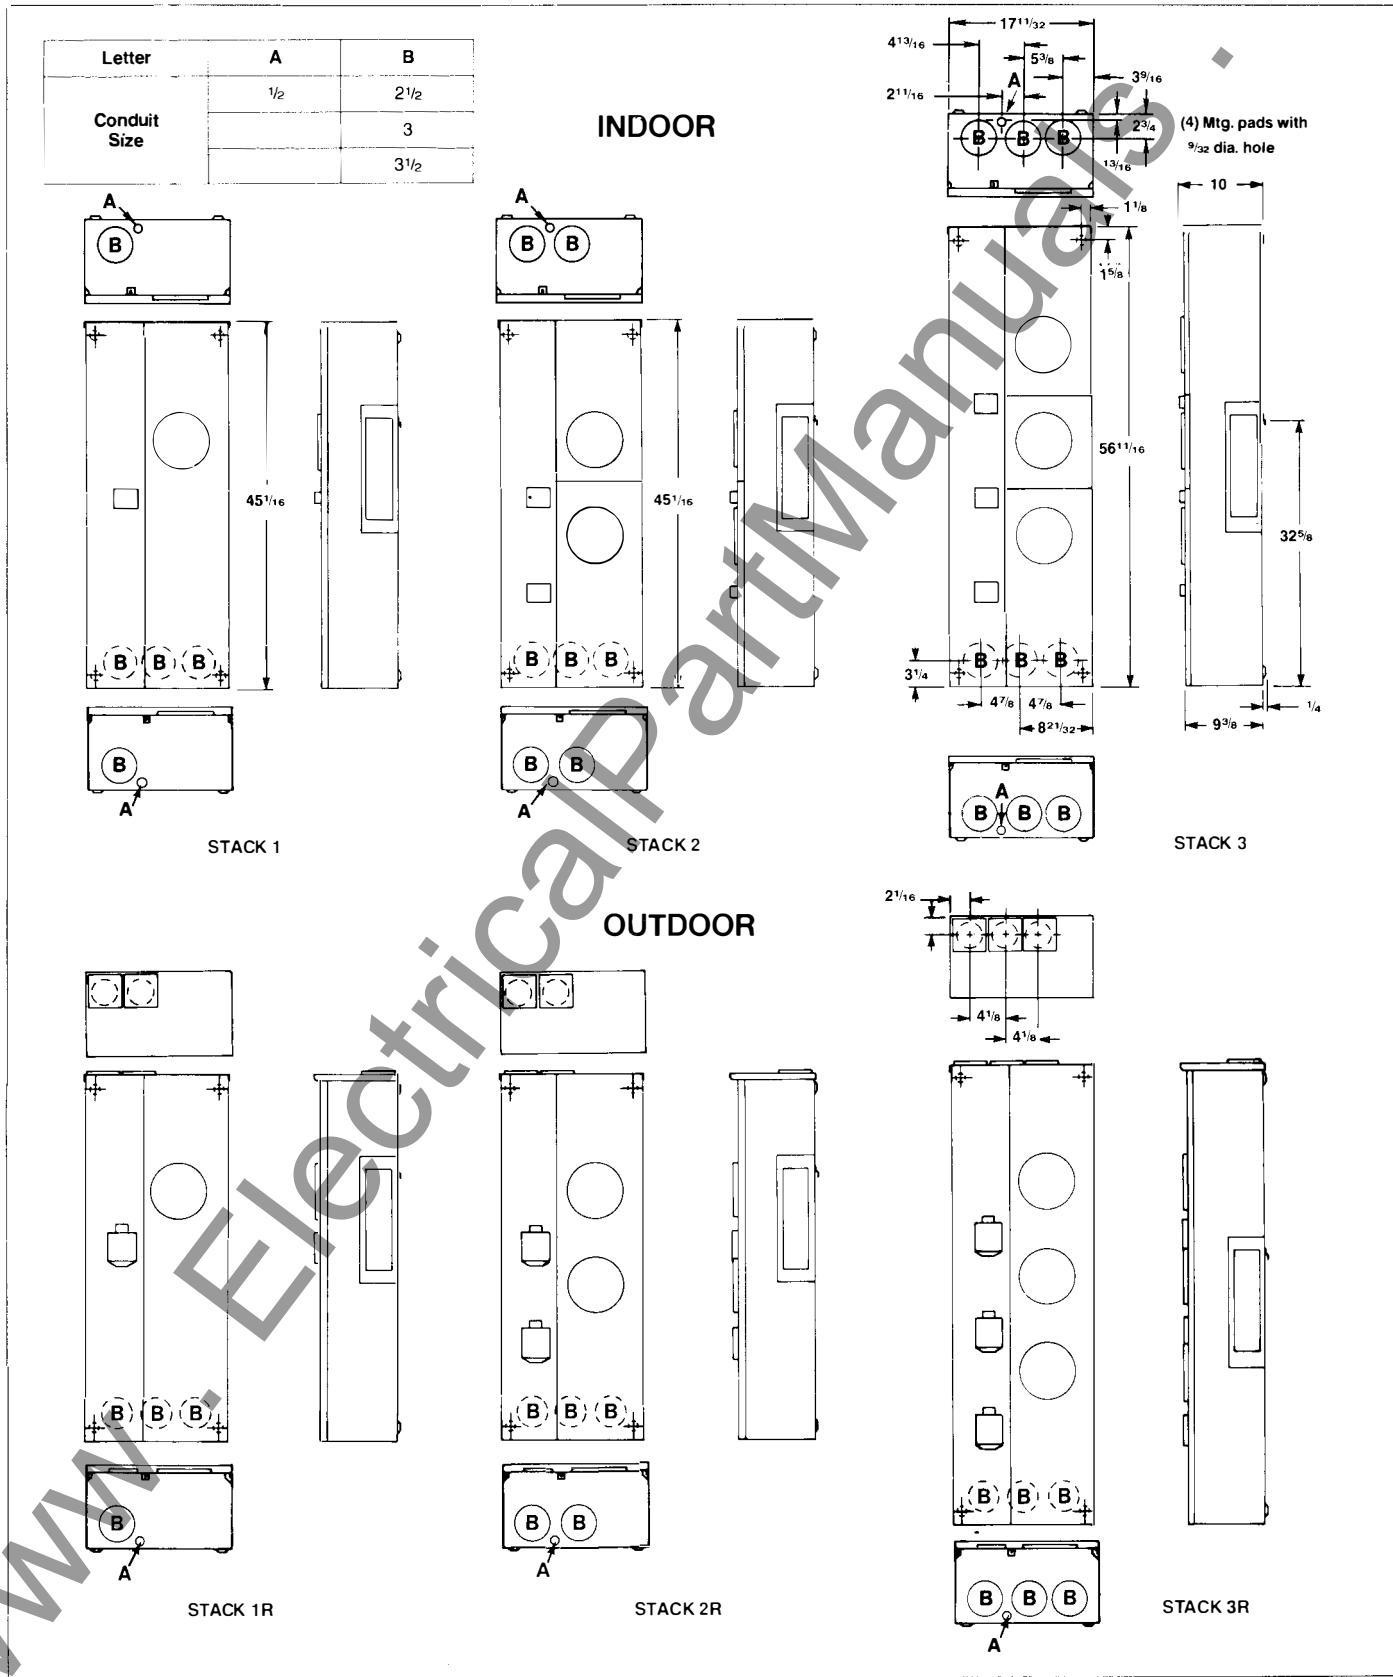

1. If the service bus is single phase 3wire 240VAC MAX, apply only stacks with sockets connected to B-C. This will

coordinate them with any of the single phase Main Breaker (MB) or Main Fusible (MF) cubicles which are also factory connected to phases B-C.

2. If the service bus is 3phase 4wire 120/208VAC MAX, apply any combination of single, two or three unit stacks connected to phases A-B, B-C, and C-A. (Example: a 9-unit apartment would be perfectly balanced with 3 sockets on A-B, 3 sockets on B-C, and 3 sockets on C-A). Of course, when the total number of apartment units is not in multiples of 3, select the stacks which will minimize the imbalance.
