FURNAS

ESP100 offers proven motor protection... at no extra cost

Hundreds of thousands of motors are now fully protected by ESP100, the first starter to combine the rugged reliability of a NEMA contactor with the cost saving performance of a heaterless solid-state overload. Moreover, ESP100 delivers all this protection at a price that is comparable to conventional starters with heaters.

ESP100 trips within three seconds on loss of phase

That's true phase loss protection. Protection that is not merely "sensitive" to phase loss, but trips in three seconds or less - well before any possibility of motor damage, but long enough to prevent nuisance tripping if phase loss is just momentary.

Why is this protection so important?

In the event of branch phase loss, the response times of conventional thermal overload relays are slow when compared to ESP100. It simply takes too long for these mechanical devices to detect a phase loss and react. Seconds become minutes, as your motor's windings overheat and begin to break-down... as your motor repair costs begin to mount.

2:1 FLA adjustment range; 4:1 below 10 amps

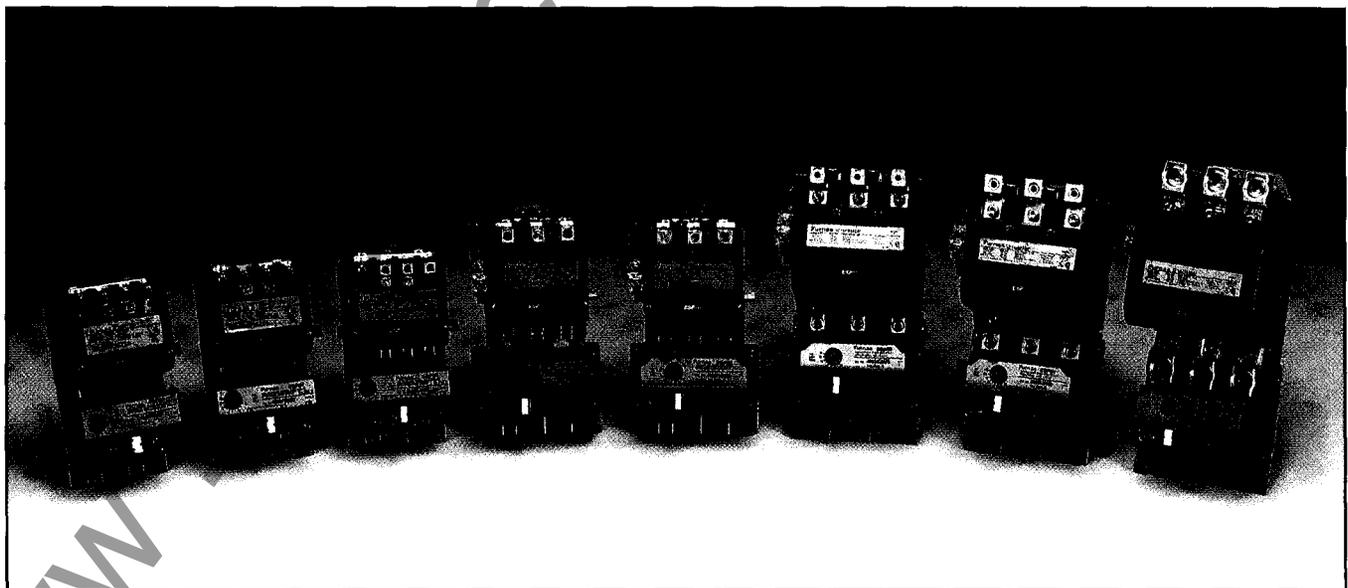

A single ESP100 solid-state overload, with its 2:1 FLA adjustment range, replaces at least six sets of heaters. That's how many heater sizes you would need to stock to cover the same range as an ESP100 overload. And for ESP100 sizes below 10 amps, the FLA adjustment range is an even higher 4:1!

±2% repeat tripping accuracy

The solid-state overload has a repeat tripping accuracy of ±2%. Under the same conditions the trip time will be the same, within ±2% every time. That's because each overload is individually calibrated to maintain superior protection. Optimum overload trip curves have been designed into ESP100 by motor protection specialists. No complex settings or field adjustments are needed.

Labor-saving installation

Just mount it, wire it, and dial in the FLA. ESP100 comes with a universal mounting plate enabling direct replacement of most NEMA starters, sizes 0 to 1.

Exclusive "half sizes"

Choose from the broadest lineup of general purpose starters available - including our exclusive "half sizes," all fully tested to NEMA standards.

Magnetic Motor Starters Solid State Overload with Phase Loss Protection

■ Heavy Duty

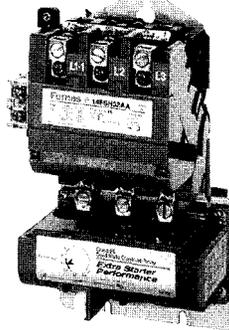

- Rugged Industrial Design
- Dual Voltage, Dual Frequency Coils
- Overload Test Feature
- Front Removable Auxiliary Interlocks
- Wide Range of Accessories
- Easy Coil Access
- High Accuracy Solid State Overload Protection
- Class 10, 20, 30 Trip Available
- Wide Overload Current Adjustment Range
- Siemens-Furnas Exclusive Half Sizes
- Straight Thru Wiring
- Gravity Dropout
- Large Silver Cadmium Contacts
- UL Listed 508 File #E14900
- CSA Certified File #LR6535
- Universal Mounting Plate

APPLICATION

Class 14 industrial magnetic starters are designed for across the line starting of single phase and polyphase motors.

ESP100 starters combine the rugged characteristics of a NEMA rated contactor with a solid state overload which provides phase loss protection. It offers the industrial user greater protection and added life for motors in heavy duty applications. The inherent benefits of the ESP100 result in cost savings as well.

ESP100 starters are available in NEMA sizes 0 through 6. In addition to the usual NEMA starter sizes, Siemens-Furnas offers four exclusive **M•M** Motor Matched Half Sizes; 1 3/4, 2 1/2, 3 1/2, and 4 1/2. These integral sizes offer the same rugged, industrial construction as our NEMA sizes and ensure efficient operating performance. **M•M** Motor Matched Half Sizes provide a real cost savings by cutting down on over capacity when NEMA sizes exceed the motor Hp ratings.

Across the line or full voltage starting is used when motor starting torque can be applied safely and current inrush does not produce an objectional voltage drop. All starters are supplied with a normally open (NO) holding contact that, in conjunction with an appropriate pilot device, will provide low voltage protection or release.

Siemens-Furnas magnetic starters are ideal for applications requiring dependability and durability. Typical applications include use with machine tools, air conditioning equipment, material handling equipment, compressors, hoists, and various production and industrial equipment as well as in demanding automotive applications.

Class 14 starter sizes 0-6 are available as an open type or in NEMA 1, 3, 4, 4X, 7 & 9, and 12 enclosures.

The self-reset overload is ideal for cranes, hoists, and other applications where the controls are mounted in a remote location that may be difficult to access. The NC overload contact opens for a short duration (50-75 msec) on an overload or phase loss condition. The unit provided can be applied in one of three ways: 1) Three wire control circuit using Furnas Size 0-4 contactor. The self-reset overload can be retrofitted and applied in a three wire control application as a remote reset overload without additional components or wiring. 2) PLC - (assuming initiating starter coil via PLC) Timers and counters can be used to determine time between restarts and maximum number of restarts. 3) Use NC overload contact to drop out a control relay. See page 75 for wiring diagrams.

Magnetic Motor Starters Solid State Overload with Phase Loss Protection

■ Heavy Duty

FEATURES

Siemens-Furnas size 0-6 magnetic starters include the following standard features.

Molded Coil-Magnetic coils are carefully wound and then sealed in epoxy. Encapsulation helps seal out moisture, promotes heat transfer, and resists electrical, mechanical, and thermal stresses.

Dual Voltage/Frequency Coil-Siemens-Furnas starters are available with dual voltage, dual frequency coils. They are designed to operate on either 50 or 60 Hertz.

Molded Contact Board-Thermoset materials resist arc tracking and the stresses of heat and severe impact.

Field Modification Kits-All starters can be modified in the field with a complete range of accessories. These include push buttons, selector switches, pilot lights, auxiliary contacts, and surge suppressors. See page 45.

ESP100 Solid State Overload Relays-These standard features of the ESP100 provide Extra Starter Performance.

- True phase loss protection; trips within 3 seconds.
- High accuracy trip curves; $\pm 2\%$ repeat trip accuracy.
- Ease of use. Mount, wire, and set FLA. (See Fig. 1.)
- Overload is self protected against short circuits.
- Overload is self powered and requires no hard wiring or separate power source.
- Simple, versatile adjustment; minimum of 2:1 FLA adjustment range. (4:1 in lower FLA ranges.)
- Heaterless construction minimizes energy costs and the costs of cabinet ventilation or cooling.
- Class 20 protection is standard. Class 10 and 30 protection are available.
- Provides motor protection for 50/60 Hertz.

ESP100 FLA Adjustment Dial – Set the adjustment dial on the overload to the FLA of the motor.

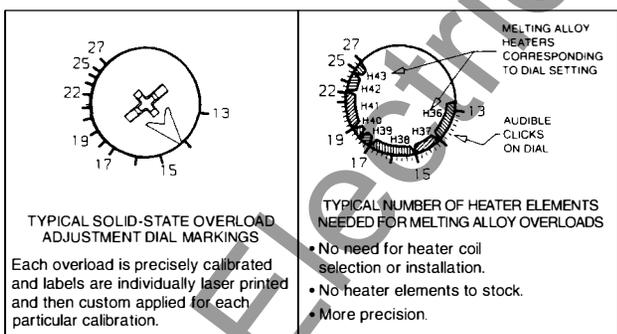

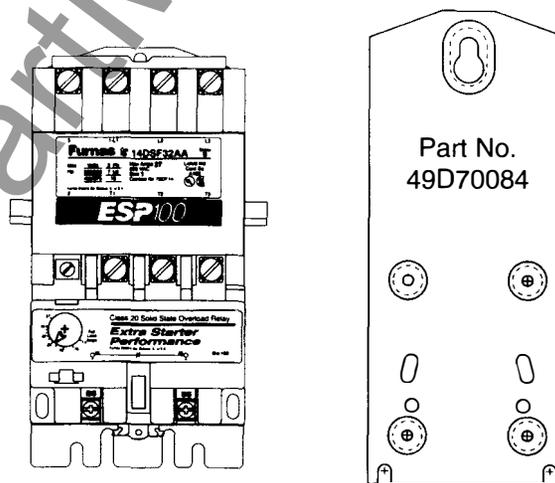

Fig. 1

ESP100 FLA Adjustment Dial – Set the adjustment dial on the overload to the FLA of the motor.

The Siemens-Furnas ESP100 FVNR size 0-1 $\frac{3}{4}$ have as standard, universal mounting which fits the following:

Cutler Hammer-
Citation Series
Freedom Series

GE- 300-Line

Square D- Type S

The ESP100 with its existing backplate mounts onto the piggyback mounting plate and is secured in place with three mounting screws.

■ Heavy Duty

AUXILIARY EQUIPMENT

- Siemens-Furnas starters are available with built-in START-STOP push buttons for 3 wire control or a HAND-OFF-AUTO selector switch for 2 wire control.
- Field modifications such as auxiliary contacts, pilot lights, push buttons, selector switches, and fuse blocks are available to meet particular application requirements.
- Normally open or normally closed auxiliary power pole kits are available for sizes 0 through 1½.
- Transformers and pneumatic timers can be ordered as either factory or field modifications. In some cases these may require a larger enclosure.
- A full line of replacement parts are available including contact kits, coils, and overload relays.

SIZE 0 THRU 4

The following features are characteristic of sizes 0 through 4.

Gravity Dropout-For added reliability, the gravity dropout of the armature and contacts is assisted by stainless steel springs which help provide quick, precise opening of the contacts. Also provides straight through wiring.

45 Degree, Wedge

Action-The 45 degree, wedge action contacts reduce tracking and provide faster arc quenching. The resulting self cleaning and reduced contact bounce mean cooler operation and longer life for the large silver cadmium oxide contacts.

Terminal Design-Control terminals are self rising pressure type.

Auxiliary Contacts-Front mounted as well as side mounted auxiliary contacts are available. A maximum of four can be mounted on sizes 0 thru 1½, three on sizes 2 thru 6.

SIZE 4½ THRU 6

In addition to the standard features, size 4½ through 6 starters incorporate many of the additional features listed for size 0 through 4 including a **M•M** Motor Matched Half Size 4½ and side mounted auxiliary contacts. Siemens-Furnas size 4½ through 6 magnetic starters use vertical lift magnetic action which provides long life and reliability.

For Single Phase, 2 Pole, Size 0 & 1 ESP100 Starters (Hp ratings 1Hp -115V, 2Hp 230V) change 6th character from "3" to "1". \$39 price deduction. 16 Amps Maximum.

Note: Hp's shown above are based on the overload amp range for the FLA's (per the National Electric Code) of typical industrial motors. All starter sizes carry one maximum Hp rating. For higher Hp single phase motors, use 3 phase starters, wire and set per diagram on page 54.

†To order starter sizes 0-1 1/4 in NEMA 3/3R enclosure change 8th character of Cat No to D. Example 14CSD32D*. Price same as NEMA 12. For all other sizes see page 49.

‡For NEMA 4X fiberglass enclosure change 8th character of Cat No to F. Example: 14CSD32F*. Price addition see page 50.

Ordering Instructions

- Use complete catalog number. Replace the (*) with letter from the coil table. Dual voltage coils are wired on high voltage unless specified on order.
- For Class 10 or 30 Overload Protection add suffix "51" or "53" to catalog number. Example for Class 10: 14CSD32B*51. Example for Class 30: 14CSD32B*53. No price addition.
- Field Modification Kits page 45. Factory Modifications page 50.

Coil Table

60 Hz Voltage	Letter
24 Separate Control	J
120 Separate Control	F
110-120/220-240	A
200-208	D
220-240	G
220-240/440-480	C
440-480	H

For other voltages and frequencies see Factory Modifications.

For Single Phase, 2 Pole, Size 0 & 1 ESP100 Starters (Hp ratings 1Hp -115V, 2Hp 230V) change 6th character from "3" to "1". \$39 price deduction. 16 Amps Maximum.

Note: Hp's shown above are based on the overload amp range for the FLA's (per the National Electric Code) of typical industrial motors.

All starter sizes carry one maximum Hp rating. For higher Hp single phase motors, use 3 phase starters, wire and set per diagram on page 54.

†To order starter sizes 0-1 3/4 in NEMA 3/3R enclosure change 8th character of Cat No to D. Example 14CRD32D*. Price same as NEMA 12. For all other sizes see page 49

‡For NEMA 4X fiberglass enclosure change 8th character of Cat No to F. Example: 22CRD32F. Price addition see page 50.

Ordering Instructions

- Use complete catalog number. Replace the (*) with letter from the coil table. Dual voltage coils are wired on high voltage unless specified on order.
- For Class 10 or 30 Overload Protection add suffix "51" or "53" to catalog number. Example for Class 10: 14CRD32B*51. Example for Class 30: 14CRD32B*53. No price addition.
- Field Modification Kits page 45. Factory Modifications page 50.

Note: Hp's shown above are based on the overload amp range for the FLA's (per the National Electric Code) of typical industrial motors.

All starter sizes carry one maximum Hp rating.

**For amp range 0.25-1.0 Amps change the 5th Character in the Cat No from "B" to "A".

††For NEMA 12 enclosures with vault hardware (in place of quarter turn fasteners) replace "N" with "O" in 8th position of catalog number. Example: 18CSC92O*. No price addition.

†NEMA 12 may be field modified for NEMA 3/3R, see page 49.

◆For NEMA 4X fiberglass enclosure change 8th character of catalog number to F. Example: 18CSC92F*. Price same as stainless steel. Available in standard width through size 4.

♣To order threaded enclosure change "H" to "L". Example: 18CSC92L*. No price addition.

Ordering Instructions

- Use complete catalog number. Replace the (*) with letter from the coil table. Dual voltage coils are wired on high voltage unless specified on order.
- For Class 10 and 30 Overload Protection add suffix "51" or "53" to catalog number. Example for Class 10: 18CSD92B*51. Example for Class 30: 18CSD92B*53. No price addition.
- Field Modification Kits page 45. Factory Modifications page 50.
- For self-reset overload option on Sizes 0-5, change 4th character from "S" or "T" to "R". No price addition.

Coil Table

60 Hz Voltage	Letter
24 Separate Control	J
120 Separate Control	F
110-120/220-240	A①
200-208	D
220-240	G
220-240/440-480*	C①
440-480*	H

For other voltages and frequencies see Factory Modifications.
*Not available with self-reset option.
①Dual voltage coils NA in stocked or modified starters.

Note: Hp's shown above are based on the overload amp range for the FLA's (per the National Electric Code) of typical industrial motors. All starter sizes carry one maximum Hp rating.

**For amp range 0.25-1.0 Amps change the 5th Character in the Cat No from "B" to "A".

††For NEMA 12 enclosures with vault hardware (in place of quarter turn fasteners) replace "N" with "O" in 8th position of catalog number. Example: 25CSD92O*. No price addition.

†NEMA 12 may be modified for NEMA 3/3R, see page 49.

◆For NEMA 4X fiberglass enclosure change 8th character of catalog number to **F**. Example: 25CSD92F*. Price same as stainless steel. Available in standard width through size 4.

Ordering Instructions

- Use complete catalog number. Replace the (*) with letter from the coil table. Dual voltage coils are wired on high voltage unless specified on order.
- For Class 10 or 30 Overload Protection add suffix "51" or "53" to catalog number. Example for Class 10: 25CSD72B*51. Example for Class 30: 25CSD72B*53. No price addition.
- Field Modification Kits page 45. Factory Modifications page 50.
- Sizes 3 1/2-5 are not field convertible. To order fusible disconnect see Factory Assembled Fuse Clips page 50.
- For fusible combination starters, see page 50 for factory modified suffix.
- For self-reset overload option on Sizes 0-5, change 4th character from "S" or "T" to "R". No price addition.

Note: Hp's shown above are based on the overload amp range for the FLA's (per the National Electric Code) of typical industrial motors. All starter sizes carry one maximum Hp rating.

††NEMA 12 may be field modified for NEMA 3/3R, see page 49.

†Pick Low speed overload relay from Table 1. If motor FLA are unknown, select overload on the basis that low speed FLA will be no greater than 50% of high speed FLA.

Table 1

Replace † with the letter that corresponds to the correct low speed FLA.

Size	FLA	†
0, 1	0.25-1	A
0, 1	0.75-3	B

4 1/2	100-210	S
5	100-270	U

Ordering Instructions

- Use complete catalog number. Replace the (*) with letter from the coil table. Dual voltage coils are wired on high voltage unless specified on order.
- Contact Sales Office for 3 or 4 speed starters.
- Field Modification Kits page 45. Factory Modifications page 50.
- For self-reset overload option on Sizes 0-5, change 4th character from "S" or "T" to "R". No price addition.

Coil Table

60 Hz Voltage	Letter

Note: Hp's shown above are based on the overload amp range for the FLA's (per the National Electric Code) of typical industrial motors. All starter sizes carry one maximum Hp rating.

††NEMA 12 may be field modified for NEMA 3/3R, see page 49.

†Pick Low speed overload relay from Table 1. If motor FLA are unknown, select overload on the basis that low speed FLA will be no greater than 50% of high speed FLA.

Table 1

Replace † with the letter that corresponds to the correct low speed FLA.

Size	FLA	†

4 1/2	100-210	S
5	100-270	U

Ordering Instructions

- Use complete catalog number. Replace (*) with letter from the coil table. Dual voltage coils are wired on high voltage unless specified on order.
- Field Modification Kits page 45. Factory Modifications page 50.
- Contact Sales Office for 3 and 4 speed starters.
- For self-reset overload option on Sizes 0-5, change 4th character from "S" or "T" to "R". No price addition.
- Units listed are furnished with non fusible disconnects. Fuse clip kits are available as factory or field modifications, see page 45 or 50.

Coil Table

60 Hz Voltage	Letter
24 Separate Control	J
120 Separate Control	F

50	75	150	150	100-210	4 1/2	32RSS†92B1V*	15300	32RSS†92W1V*	24090	32RSS†92N1V*	20502

Note: Hp's shown above are based on the overload amp range for the FLA's (per the National Electric Code) of typical industrial motors. All starter sizes carry one maximum Hp rating.

††NEMA 12 may be field modified for NEMA 3/3R, see page 49.

†Pick Low speed overload relay from Table 1. If motor FLA are unknown, select overload on the basis that low speed FLA will be no greater than 50% of high speed FLA.

Table 1

Replace † with the letter that corresponds to the correct low speed FLA.

Size	FLA	†
0, 1	0.25-1	A
0, 1	0.75-3	B
0, 1	2.5-10	D

Ordering Instructions

- Use complete catalog number. Replace (*) with letter from coil table. Dual voltage coils are wired on high voltage unless specified on order.
- Field Modification Kits page 45. Factory Modifications page 50.
- Enclosure Modifications page 50.
- For self-reset option on 0-5 starters, change 4th character from "S" to "R". No price adder.

Coil Table

60 Hz Voltage	Letter
24 Separate Control	J
120 Separate Control	F
110-120/220-240	A
200-208	D
220-240	G
220-240/440-480	C
440-480	H

For other voltages and frequencies see Factory Modifications.

A1 Frame Solid State Overload

B Frame Solid State Overload

APPLICATION

ESP100 solid state overload relays are self powered requiring no separate source to power the circuit board. They provide phase loss protection, fewer connection points and high repeat trip accuracy which results in longer motor life and cost savings. NEMA Class 10, 20 and 30 trip curves are available for a variety of applications.

These panel mounted overloads can be used to upgrade existing starter applications where panel mounted manual reset thermal overloads are used. In addition, ESP100 overloads can be panel mounted when used with other types of controllers, such as DP and IEC contactors.

ESP100 overloads can be used on high voltage applications, making them ideal for use with vacuum contactors and other high voltage control.

Overloads can be retrofitted on existing Siemens-Furnas starters using the retrofit plate suffixes or on other brands using the plates listed in the universal retrofit plates table on this page.

The self-reset overload option is ideal for cranes, hoists, and other applications where the controls are mounted in a remote location that may be difficult to access. The NC overload contact opens for a short duration (50-75 msec) on an overload or phase loss condition. The unit provided can be applied in one of three ways: 1) Three wire control circuit using Furnas Size 0-4 contactor. The self-reset overload can be retrofitted and applied in a three wire control application as a remote reset overload without additional components or wiring. 2) PLC - (assuming initiating starter coil via

PLC) Timers and counters can be used to determine time between restarts and maximum number of restarts. 3) Use NC overload contact to drop out a control relay. See wiring diagrams on page 75.

FEATURES

The solid state overload provides phase loss protection for the motor by tripping in three seconds upon complete loss of one phase of a three phase motor branch circuit.

Each overload has a minimum 2:1 current adjustment range with the adjustment dial reading out in full load amps. In addition to the markings on the dial, there are audible clicks which allow for extremely fine tuning.

The heaterless construction of these overloads minimizes energy costs and the costs of cabinet ventilation or cooling. Solid state overloads can be used at temperatures from -30°C to 70°C and are rated for 50 Hz and 60 Hz applications.

A1 Frame 958 Series

B Frame 958 Series

APPLICATION

Siemens-Furnas solid state overload relays are self powered requiring no separate source to power the circuit board. They provide excellent protection of hermetically sealed compressors and artificially cooled motors which require ambient insensitivity and quick trip response. Combined with a series lockout relay, they can provide unsurpassed protection for hermetically sealed compressor motors in air conditioning applications. The combination of high trip speed, current adjustment, and ease of installation makes it suitable for these applications. The trip curves have been custom tailored to provide proper overload protection on such loads without nuisance tripping.

The self-reset overload option is ideal for cranes, hoists, and other applications where the controls are mounted in a remote location that may be difficult to access. The NC overload contact opens for a short duration (50-75 msec) on an overload or phase loss condition. The unit provided can be applied in one of three ways: 1) Three wire control circuit using Size 0-4 contactor. The self-reset overload can be retrofitted and applied in a three wire control application as a remote reset overload without additional components or wiring. 2) PLC - (assuming initiating starter coil via PLC) Timers and counters can be used to determine time between restarts and maximum number of restarts. 3) Use NC overload contact to drop out a control relay. See wiring diagrams on page 75.

FEATURES

The overload provides phase loss protection for the motor by tripping in three seconds upon complete loss of one phase of a three phase motor branch circuit.

The heaterless construction of these overloads minimizes energy costs and the costs of cabinet ventilation or cooling. While thermal overloads require a heater selection based on a relatively wide range, these overloads have many clicks covering the same ampere range (see Fig. 1 below).

958L Trip Curve

"A1" Frame 958L Series

"B" Frame 958L Series

APPLICATION

Siemens-Furnas offers the 958L Series solid state overload – designed specifically for the oil market to prevent rotor damage.

Rotors can be damaged in 8 to 15 seconds during motor stall conditions if electrical power is not removed. To prevent damage during motor stall, the 958L solid-state overload provides the solution.

As indicated on the time-current characteristics graph below left, the 958L curve shows power will be removed in 7 seconds starting at 250% locked rotor current. Therefore, die cast or fabricated rotors will be protected from damage, saving lost time and money.

The 958L gives full protection on all standard motors, oil well pump motors, multi-torque connections, and ultra-high slip motors.

Furnas NEMA starters with the 958L series overload combine the rugged characteristics of a NEMA contactor with the custom overload which provides phase loss protection. It offers the user greater protection and added life for motors in heavy duty oilfield applications. The inherent benefits of the NEMA starters with the 958L

series overload result in unsurpassed reliability and performance.

The 958L series overload relays are self-powered solid-state overload relays. They generate their own running power and do not need a separate source of 120V to power the circuit board. They are wired just like a traditional thermal overload relay. These overload relays are designed specifically for the cyclical loads experienced with oil well pumps.

The self-reset overload is ideal for applications where the controls are mounted in a remote location that may be difficult to access. The NC overload contact opens for a short duration (50-75 msec) on an overload or phase loss condition. The unit provided can be applied in one of three ways: 1) Three wire control circuit using Size 0-4 contactor. The self-reset overload can be retrofitted and applied in a three wire control application as a remote reset overload without additional components or wiring. 2) PLC - (assuming initiating starter coil via PLC) Timers and counters can be used to determine time between restarts and maximum number of restarts. 3) Use NC overload contact to drop out a control relay. See wiring diagrams on page 75.

Solid State Overload Relay

3RB12

SOLID STATE OVERLOAD RELAY

- Phase Loss Protection
- Ground Fault Protection
- Adjustable Trip Class

- Ground Fault Protection: Equipment or Low-level.
- Overload Warning Contact Option.
- Selectable Trip Class: 5, 10, 15, 20, 25, 30.
- Three LED Displays: Ready, Ground Fault, and Overload.
- 2 NO / 2 NC Electrically Isolated Auxiliary Contacts are Standard.
- Remote and Automatic Reset by Means of External Wiring.
- Combined Test/Reset button with function test.
- Monostable or Bistable Output Versions Available.
- Self Monitoring.
- UL Listed.
- CSA Certified.

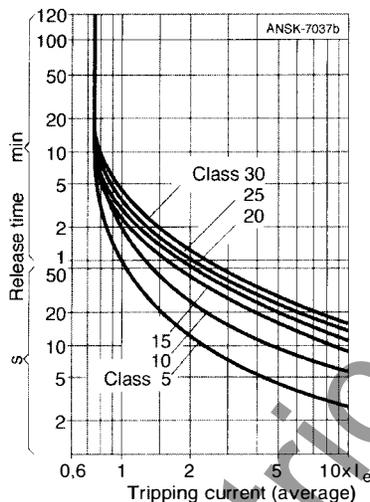

Fig. 1 Three Phase Trip Curves

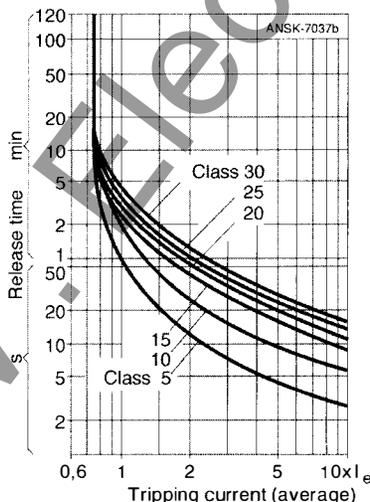

Fig. 2 Trip Curves for Phase Loss/Unbalance

APPLICATION

The 3RB12 solid state overload feature adjustable trip class, ground fault protection, phase unbalance, and phase loss protection.

An optional overload warning contact provides status from which to take action in advance of a shut down. These and many other functions were designed to meet the specific needs of equipment protection.

TRIPPING CHARACTERISTICS

The three phase trip curves (Fig. 1) show the dependence of the tripping time from a cold state on the multiple of the current setting. If the unit is pre-loaded with 100% of the current, the tripping times are shortened. In the event of a phase loss or a current unbalance >40% of the current setting, the characteristic in phase loss/unbalance trip curve (Fig. 2) applies.

MODE OF OPERATION

The motor current is detected in each phase via current transformers and continuously monitored by a micro-processor.

If an overload >110% of the current setting occurs, if there is a current unbalance >40%, or if a phase loss occurs, tripping is initiated by the switching of two auxiliary contacts, 1 NO/1 NC, (numeral 6 in Front View diagram on page 42).

Resetting is possible after a recovery time of 5 minutes has elapsed, either by pressing the Test/Reset button on the unit or by remote or automatic reset.

In the event of a ground-fault, the unit trips via separate (1 NO/1 NC) output without a time delay.

(Numeral 12 in Front View diagram on page 42). Resetting after a ground fault is possible without a time delay.

A test of the unit's functions, namely current detection, thermistor and ground-fault input, and tripping functions of the auxiliary contacts can be initiated by pressing the TEST/ RESET button. A test of the unit's functions can be carried out during operation without the contacts changing state. The test is verified by LED signals.

A self-monitoring feature causes the unit to trip when an internal fault occurs.

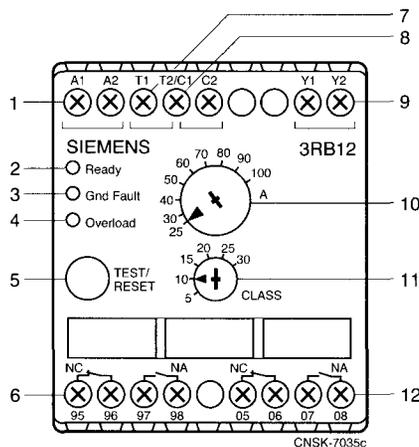

Function of the output relays In case of:	Monostable 3RB12...-...0	Bistable 3RB12...-...1
Dropout of the control voltage without trip	Unit trips	No change in the switching state of the auxiliary contacts
Return of the control voltage without trip	Unit resets	
Return of the control voltage after trip	Unit remains tripped	
	Resetting:	
	Overload trip, after 5 min.	
	Thermistor trip when 5° K below the operating temperature.	
	Ground-fault trip, immediately.

SOLID STATE OVERLOAD RELAY

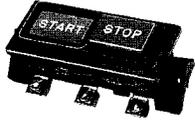

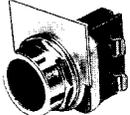

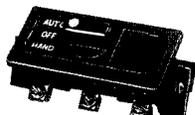

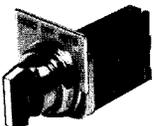

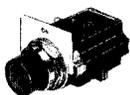

Solid State Overload Relay

■ Technical Data

General Data		
Tripping	On overload, phase failure, and current unbalance as well as on response of thermistor motor protection and on ground fault	
Release time classification	Selectable: CLASS 5, 10, 15, 20, 25, 30	
Operation	Combined TEST/RESET button with function test; auto and remote RESET possible: Dial for current setting I_n ; 6 step dial for trip class setting	
Indicators	Green "Ready" LED On: "Ready" OFF: "No control supply voltage" or "Function test negative: unit disabled"	
	Red "Overload" LED Continuous On: "Overload trip due to current and/or thermistor" Flashing: "Overload warning"	
	Red "Ground Fault" LED On: "Ground Fault"	
Perm. ambient/storage temperature	-25°C to +70°C/-40°C to +85°C	
Installation altitude	Up to 2000 meters above sea level	
Degree of protection (per IEC529)	3RB1246 - IP20 3RB1253,57,62 - IP00	
Shock resistance (sine-wave)	15g/11ms	
Design	sensing current transformers are integrated in all sizes	
Mounting position	Any position	
Mounting	3RB1246: snap-on mounting onto 35mm DIN rail or panel mounting with accessory	
	3RB1253, 57, 62: panel mounting	
EMC noise immunity	Conducted disturbance injection, burst per IEC 801-4: 2k (corresponds to Severity 3)	
	Conducted disturbance injection, surge per IEC 801-5: 2k (corresponds to Severity 3)	
	Electrostatic discharge per IEC 801-2: 8kV (corresponds to Severity 3)	
	Field disturbance injection per IEC 801-3: 10V/m (corresponds to Severity 3)	
EMC emitted interference	Limit value Class B per DIN VDE 0875 Part 11/EN 55011	
Main / Power circuit		
Rated insulation voltage U_i	690 V (with Pollution Severity 3)	
Rated operational voltage U_n	690 V	
Rated impulse withstand voltage U_{imp}	6 kV	
Rated frequency and type of current	50/60 Hz; three-phase AC	
Dia. of CT Windows (3RB1246)	10mm (units with 25A max. current setting I_n)	
	15mm (units with 100A max. current setting I_n)	
Bus connection (100 A max. I_n)	3RB 1253 3RB 1257 3RB 1262	
Tightening torque (lb in)/(Nm)	M8: 89 to 124 / 10 to 14 M10: 124 to 210 / 14 to 24 M12: 177 to 310 / 20 to 35	
Fine-stranded with cable lug (AWG)/(mm ²)	2 to 4/0 / 35 to 95 1/0 to 500 MCM / 50 to 240 1/0 to 500 MCM / 50 to 240	
Stranded with cable lug (AWG)/(mm ²)	1/0 to 250 MCM / 50 to 120 2/0 to 500 MCM / 70 to 240 2/0 to 500 MCM / 70 to 240	
Auxiliary / Control circuit		
Auxiliary contacts (met. separated)	1 NO / 1 NC for overload trip due to current and/or thermistor; 1 NO / 1 NC for ground fault trip	
Recovery time	5 min (fixed), after trip by overcurrent	
Rated insulation voltage U_i	3000 V (with Pollution Severity 3)	
Rated impulse withstand voltage U_{imp}	4 kV	
Rated continuous current	5 A	
Switching capacity	AC = B300 AC-15: 6 A/24V; 6A/120V; 3 A/230 V	
	DC = R300 DC-13: 2 A/24 V; 0.55A/60 V; 0.25A/125V	
Rated control supply voltage U_c	AC 50/60 Hz: 110V-220V-240V; DC: 24V	
Operating range	AC 50/60 Hz: 0.85 to 1.1 x U_c ; 2 VA 24 VDC: 0.85 to 1.2 x U_c (DIN 19 240); 2W	
Mains buffering range	200 ms	
Thermistor motor protection (PTC thermistor detector)	Total cold resistance: 1.5k Ω Response value: 2.7k Ω to 3.1k Ω ; release value: 1.5k Ω to 1.75k Ω	
Short circuit protection	Fuse-links Utilization Category gLgA 6A, UL: 6A; Circuit-breaker 2A, C characteristic	
Conductor sizes	Tightening torque lb-in/(NM)	7 to11 / 0.8 to1.2

Dual Voltage on Secondary of Transformer

Contact Siemens-Furnas Controls Sales Office for further information.

The standard control transformer supplied for starters NEMA sizes 0 thru 2 1/2 will be rated 45VA and have the appropriate secondary fuse. Primary fuses will not be supplied as standard. For primary fuse options select appropriate suffix from table. According to N.E.C. 430-72, 450-3, and UL 508, section 32, primary fuses are not required for control transformers rated less than 50VA and are inherently protected. Size 6 starters standard with 100VA transformer for DC rectifier circuit.

Ordering Instructions

- Replace (*) with letter from Transformer Table.
- Catalog Number Suffixes indicate numbers or letters added to the end of a catalog number. Example: 14DSD32BF becomes 14DSD32BFBA.
- Multiple Modification Suffixes are added in numerical, alphabetical sequence.

Wiring Diagrams

Solid State Overload

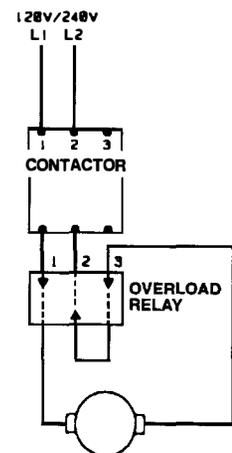

Three Phase Size 0-4

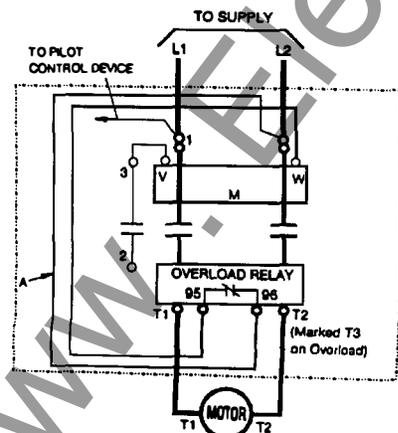

Three Phase Sizes 4 1/2, 5

3 Phase Size 1 3/4-3 Applied on Single Phase

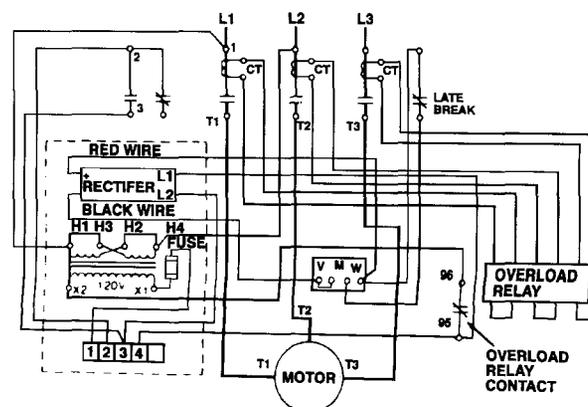

For an approximate setting of a Single Phase motor application, multiply the motor nameplate by .75 and set the dial on the overload to the resulting value.

The device must be wired with polarity as shown. Neutral and L1 wires must be wired as indicated on the drawing, polarity is indicated by ↓ ↑.

Single Phase Size 0-1 (0.25 to 16A)

Three Phase Size 6

Introducing the 3RB12... advanced overload relays for added control

com

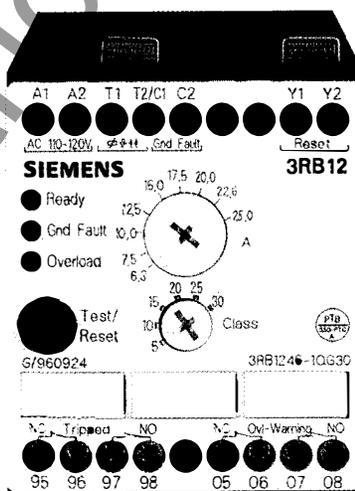

Introducing the new Siemens line of 3RB12 solid-state overloads. These panel mounted overloads feature adjustable trip class, ground fault protection, phase unbalance and phase loss protection.

An optional overload warning contact provides status from which to take action in advance of a shut down.

These and many other functions were designed to meet the specific needs of equipment protection.

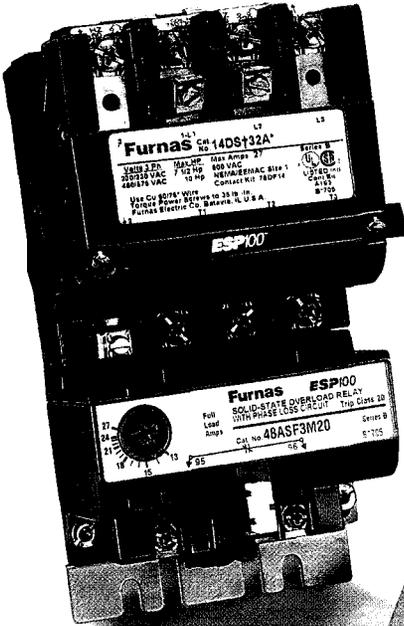

- Ground fault protection, equipment or low-level.
- Overload warning circuit option. Separate output contacts warn of impending overload for critical applications.
- Selectable trip class: 5, 10, 15, 20, 25 and 30.
- Three LED displays. Ready, Ground Fault, and Overload.
- Monostable or bistable output versions are available.

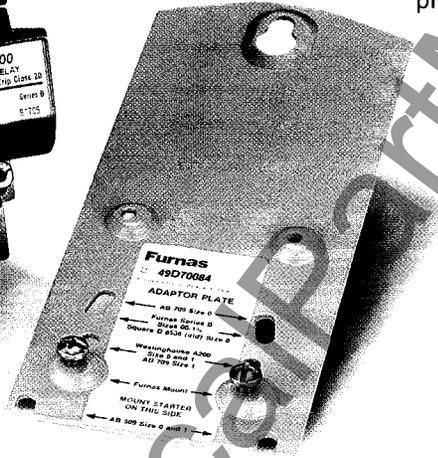

- Self monitoring. Unit trips in the event of an internal fault.
- 2NO/2NC electronically isolated auxiliary contacts are standard. 1NO/1NC for overload trip, 1NO/1NC for ground fault trip; or, 1NO/1NC for overload trip and/or ground fault trip, 1NO/1NC for overload warning.

- Remote and automatic reset by means of external wiring.
- Combined Test/Reset button with function test.

Universal mounting plate makes upgrading easy.

ESP100 is equipped with a unique mounting plate that permits it to replace most NEMA size 0 and 1 starters without modification. You can simply update your controls to ESP100 as part of your routine maintenance program, without having to change your existing cabinets or panels, or having to drill and tap new mounting holes.
