## GR Series Relay

## Humericallic|ay

## GRD1

Feeder Manager

## FEATURES

## Protection functions

- Non-directional and directional overcurrent and earth-fault protection and sensitive earth fault protection (option)
- Overvoltage and undervoltage protection
- Thermal overload protection
- Underfrequency or overfrequency protection
- Negative phase sequence overcurrent protection
- Undercurrent protection
- Circuit breaker failure protection
- Autoreclose function (option)

## Control functions

- Indication of the status of switching devices, i.e. circuit breakers and disconnectors
- Open and close commands for switching devices
- Synchronism check function (option)
- MIMIC configuration display

## Monitoring and Metering

- Circuit breaker condition monitoring
- Trip circuit supervision
- Metering: three-phase currents and voltages, residual current and voltage, frequency, active and reactive power, power factor, and max. demand values.

## Recording

- Event record: 480 most recent events
- Alarm record: 32 most recent alarms
- Fault record: 8 most recent faults
- Disturbance record: 9 analog and 32 binary signals

## User Interface

- Menu-based HMI system
- Graphical LCD display
- PLC function
- Configurable binary inputs and outputs
- Configurable LED indications
- Communication Interface: RS485, Fibre optic or Ethernet LAN (option)

## APPLICATION

GRD150 feeder manager is designed for protection, control, metering and supervision of medium voltage networks.

GRD150 includes multiple, high accuracy, overcurrent protection elements (for phase and/or earth fault) with
inverse time (IDMTL) and definite time delay (DTL) functions. All phase, earth and sensitive earth fault overcurrent elements can be independently subject to directional control. The directional elements provide user-settable characteristic angles.

Other protection functions are also available, including thermal protection to IEC60255-8, negative sequence overcurrent protection, under/overvoltage and under/ over frequency protections.

GRD150 provides continuous monitoring of internal circuits and of software. External circuits are also monitored, by trip circuit supervision, CT and VT supervision, and CB condition monitoring features.

A user-friendly HMI is provided through a backlit LCD, programmable LEDs, keypad and menu-based operating system. PC access is also provided, either for local connection via a front-mounted RS232 port, or for remote connection via a rear-mounted RS485 or fibre optic port. The communication system allows the user to read and modify the relay settings, and to access data gathered by the relay's metering and recording functions.

Data available either via the relay HMI or communications ports includes the following functions.

- Metering
- Fault recording
- Event recording
- Alarm recording
- Disturbance recording (available via communications ports)

Figure 1 - Front View

Table 1 GRD150 models and Functions

| Function | GRD150- |  |  |  |
| :---: | :---: | :---: | :---: | :---: |

IDMTL: inverse definite minimum time
DTL: definite time
INST: instantaneous
(*): PC tools (MIMIC editor and PLC editor) are option.

## GRD150

## FUNCTIONS

## Protection

- 4-stage non-directional and directional overcurrent and earth-fault protection and sensitive earth fault protection (option)
$1^{\text {st }}$ and $2^{\text {nd }}$ stage: Instantaneous, IDMTL or DTL $3^{\text {rd }}$ and $4^{\text {th }}$ stage: Instantaneous or DTL
- 2-stage non-directional and directional negative phase sequence overcurrent protection $1^{\text {st }}$ stage: Instantaneous, IDMTL or DTL $2^{\text {nd }}$ stage: Instantaneous or DTL
- 2-stage overvoltage and undervoltage protection $1^{\text {st }}$ stage: Instantaneous, IDMTL or DTL $2^{\text {nd }}$ stage: Instantaneous or DTL
- 6-stage underfrequency or overfrequency protection
- Thermal overload protection
- Cold load protection function or Inrush current (2 $2^{\text {nd }}$ harmonic) detector provided for energising the system
- Undercurrent protection
- Broken conductor detection
- Circuit breaker failure protection
- Autoreclose function: 5-shots, 3-phase autoreclose (option)

## Control

Two-stepped operation (select-control) is used for the control procedure of circuit breakers, disconnectors, earthing disconnector switches and transformers to ensure highly reliable operation.

- Control of circuit breakers, disconnectors and earthing disconnector switches
- Interlock check
- Synchronism check for circuit breaker closing (option)
- MIMIC configuration picture displayed on LCD
- Double command blocking
- Switchgear operation counter
- Control blocking

Password protection is provided to operate above functions.

## Monitoring and Metering

- Status monitoring of switchgear devices and failure monitoring of power apparatus, control equipment, protection relays and ancillary equipment
- Metering: current, voltage, frequency, active power, reactive power and max. demand values
An energy calculation (Watt-hour, var-hour) is also available.
- Limit value checking of metering
- Opening and closing time monitoring

These data are available on the HMI and at a local or remote PC.

## Recording

- Event records: The most recent 480 time-tagged events with 1 ms resolution are stored.
- Alarm records: The most recent 32 time-tagged alarms with 1 ms resolution are stored.
- Fault records: The most recent 8 time-tagged faults with 1 ms resolution are stored.
- Disturbance records: GRD150 can record 9 analog and 32 binary signals, initiated by relay tripping. Pretrigger and post-trigger recording times can be set, and the maximum number of records which can be stored is dependent on the recording times chosen.

These records are available on the HMI and at a local or remote PC.

## GRD150

## Inverse Time Operate and Reset Curves

Inverse time operate function
$t=R T M S \times\left[\frac{t_{r}}{1-\left(I / I_{S}\right)^{2}}\right]$

Dependent time reset function

## Constants for dependent time curves

| Curve Description | $\mathbf{k}$ | $\boldsymbol{\alpha}$ | $\mathbf{C}$ | $\mathbf{t}_{\mathbf{r}}$ |

| US CO2 Short Time Inverse (STI) | 0.02394 | 0.02 | 0.01694 | 2.261 |

Figure 2 - Operate and Reset Characteristics of IDMTL

## USER INTERFACE

## Relay Front Panel

A user friendly interface is provided on the relay front panel. A menu-based system provides for easy programming of relay functions and access to realtime and stored data. The front panel includes the following features.

- Graphical LCD display with backlight.
- 12 LEDs including 8 user programmable LEDs.
- Keypad.
- RS232C serial port for connection of local PC.

## Local PC Connection

The user can communicate with the GRD150 from a local PC via the RS232C port on the front panel. Using RSM100 software, the user can view and modify settings, monitor real-time metering and analyse recorded data.

## Relay Setting and Monitoring (RSM) and Remote Control System

GRD150 can be connected to the RSM system via the rear mounted serial communications port, using RS485 or other connections such as fibre optic, Ethernet LAN, etc., (specified at time of order). Using RSM100 software, the user can view and modify settings, monitor real-time metering and analyse recorded data.

A maximum of 32 relays can be connected to the remote PC in multi-drop mode, by connection via a protocol converter, with data transmission rate of 64kbps using RSM-X protocol. Modbus®(RTU) protocol can be also available.

The figures below show the configuration of the RSM system and typical displays from the RSM100 software.

Using an additional port (option), GRD150 can be connected to a Substation Control System. In this case, GRD150 supports IEC60870-5-103 or DNP3.0 transmission protocols.

Figure 3 - Relay Setting and Monitoring System

## Mimic Editor (MMEdit)

Yhe user can configure and customize the MIMIC data displayed on the LCD of GRD150 using MMEdit software. The MIMIC data produced by the MMEdit software can be uploaded to GRD150 via the PC communication port (RS232C).

Figure 4 - PC Display of MMEdit

## PLC Editor (PLCEdit)

The user can customize logic functions on GRD150 such as trip and interlock sequence, etc., using PLCEdit software. The PLC data produced by the PLCEdit software can be uploaded to GRD150 via PC communication port (RS232C).

Figure 5 - PC Display of PLCEdit

## GRD150

## PC DISPLAY

Setting

Record (disturbance record: data analysis)

Status: display measurement values of power system quantities and status of relay element, etc. Setting: change settings of protection relay and control function, etc.

Record: display fault record, event record, alarm record and disturbance record.

ENVIRONMENTAL PERFORMANCE

| Test | Standards | Details |
| :---: | :---: | :---: |
| Atmospheric Environment |  |  |
| Temperature | IEC60068-2-1/2 | Operating range: $-10^{\circ} \mathrm{C}$ to $+55^{\circ} \mathrm{C}$. <br> Storage / Transit: $-25^{\circ} \mathrm{C}$ to $+70^{\circ} \mathrm{C}$. |
| Humidity | IEC60068-2-3 | 56 days at $40^{\circ} \mathrm{C}$ and $93 \%$ relative humidity. |
| Enclosure Protection | IEC60529 | Front: IP51 or IP52 with cover <br> Rear: IP20 |
| Mechanical Environment |  |  |
| Vibration | IEC60255-21-1 | Response - Class 1 <br> Endurance - Class 1 |
| Shock and Bump | IEC60255-21-2 | Shock Response Class 1 Shock Withstand Class 1 Bump Class 1 |
| Seismic | IEC60255-21-3 | Class 1 |
| High Voltage Environment |  |  |
| Dielectric Withstand | IEC60255-5 | 2 kV rms for 1 minute between all terminals and earth. 2 kVrms for 1 minute between independent circuits. <br> 1 kV rms for 1 minute across normally open contacts. |
| High Voltage Impulse | IEC60255-5 | Three positive and three negative impulses of 5 kV (peak), $1.2 / 50 \mu \mathrm{~s}, 0.5 \mathrm{~J}$ between all terminals and between all terminals and earth. |
| Electromagnetic Environment |  |  |
| High Frequency Disturbance / <br> Damped Oscillatory Wave | $\begin{aligned} & \text { IEC60255-22-1 Class 3, } \\ & \text { IEC61000-4-12 } \end{aligned}$ | 1 MHz 2.5 kV applied to all ports in common mode. 1 MHz 1.0 kV applied to all ports in differential mode. |
| Electrostatic Discharge | IEC60255-22-2 Class 3, IEC61000-4-2 | 6 kV contact discharge. 8 kV air discharge. |
| Radiated RF <br> Electromagnetic <br> Disturbance | $\begin{aligned} & \text { IEC60255-22-3 Class } 3^{(*)} \text {, } \\ & \text { IEC61000-4-3 } \\ & \text { Note (*): Class } 4 \text { with cover } \end{aligned}$ | Field strength $10 \mathrm{~V} / \mathrm{m}$ for frequency sweeps of 80 MHz to 1 GHz and 1.7 GHz to 2.2 GHz . Additional spot tests at $80,160,450,900$ and 1890 MHz . |
| Fast Transient Disturbance | $\begin{array}{\|l} \text { IEC60255-22-4, } \\ \text { IEC61000-4-4 } \\ \hline \end{array}$ | $4 \mathrm{kV}, 2.5 \mathrm{kHz}, 5 / 50 \mathrm{~ns}$ applied to all inputs. |
| Conducted RF Electromagnetic Disturbance | $\begin{aligned} & \text { IEC60255-22-6, } \\ & \text { IEC61000-4-6 } \end{aligned}$ | 10 Vrms applied over frequency range 150 kHz to 100 MHz . Additional spot tests at 27 and 68 MHz . |
| Conducted Disturbance over freq. Range 15 Hz to 150 kHz | IEC61000-4-16 Class 3 | Varying voltages applied in common mode as follows: <br> 15 Hz to $150 \mathrm{~Hz}: 10 \mathrm{~V} \rightarrow 1 \mathrm{Vrms}$ (20dB/decade) <br> 150 Hz to 1.5 kHz : 1 Vrms <br> 1.5 kHz to $15 \mathrm{kHz}: 1 \rightarrow 10 \mathrm{Vrms}$ (20dB/decade) <br> 15 kHz to 150 kHz : 10 Vrms |
| Power Frequency Disturbance | IEC60255-22-7 | 300 V 50 Hz for 10 s applied to ports in common mode. 100 V 50 Hz for 10 s applied to ports in differential mode. Not applicable to AC inputs. |

| Test | Standards | Details |
| :---: | :---: | :---: |
| Surge Immunity | IEC60255-22-5 | $1.2 / 50 \mu \mathrm{~s}$ surge in common/differential modes: <br> Auxiliary power supply: 2kV/1kV (peak) <br> Input/Output: 2kV/1kV (peak) <br> RS485 port: 1kV (peak) |
| Conducted and Radiated Emissions | $\begin{aligned} & \text { IEC60255-25 } \\ & \text { EN55022 Class A } \end{aligned}$ | Conducted emissions: <br> 0.15 to $0.50 \mathrm{MHz}:<79 \mathrm{~dB}$ (peak) or $<66 \mathrm{~dB}$ (mean) <br> 0.50 to 30 MHz : $<73 \mathrm{~dB}$ (peak) or $<60 \mathrm{~dB}$ (mean) <br> Radiated emissions: <br> 30 to 230 MHz : $<30 \mathrm{~dB}$ <br> 230 to $1000 \mathrm{MHz}:<37 \mathrm{~dB}$ |
| Power Frequency Magnetic Field | IEC61000-4-8 Class 4 | Field applied at 50 Hz with strengths of: 30A/m continuously, <br> $300 \mathrm{~A} / \mathrm{m}$ for 1 second. |
