**Flexitest™ Switch  
Type FT-1 and FT-1X**

*Figure 1. FT-1 Flexitest Switch (Front View) and Extended FT-1X*

## **APPLICATION**

The ABB Type FT-1 and FT-1X Flexitest Switches and Test Plugs provide a safe, simple, fast and reliable method to isolate and service installed equipment.

### **Advantages**

The Flexitest Switches and Test Plugs have all the features necessary for applications involving the measurement of individual currents and voltages to facilitate testing of substation instrumentation and protection devices. The make before break current short circuit feature also allows test personnel to quickly and safely isolate equipment from current transformer (CT) circuits. The Extended FT-1X test switch brings the rear terminal connections to the same depth as most panel mounted protective relays and equipment.

### **Safe and Convenient**

All measurements and tests can be performed at the front of the switchboard without taking any devices out of service.

### **Quality**

The quality of ABB products comes from years of experience and vigorous quality testing programs.

### Fast and Reliable

When Test Plugs are used, any number of circuits may be tested in rapid succession. One plug properly connected can test all instruments or meters of a particular type.

### Maximum Flexibility

The FT-1 and FT-1X Switch is built with a maximum of ten individual poles, or switch units. The switches can be assembled in a variety of different arrangements, to match customer requirements.

ABB Test Plugs are used in conjunction with the FT Switches to enable easy measurement, calibration, verification or maintenance of relays, meters and instruments.

Voltage measurements can also be made directly on the FT Switch without disturbing existing connections. There is a test clip located on the top of each pole that allows connection with standard spring clip test leads.

### Security

With the cover in place, a meter type lead seal can be placed through either of the cover studs of the FT Switch to prevent unauthorized access to the switch. As an additional feature, a clear cover is available that can also be installed and locked with the switchblades in the open or closed position.

## SPECIFICATIONS

### Ratings

The standard FT-1 switch is rated at 600 volts and 30 amps. The extended version FT-1X switch is rated at 300 volts 30 amps. Both switches meet or exceed all requirements of ANSI/IEEE Standard C37-90.

### Mounting

FT-1 Switches are designed for semi-flush mounting on the front of switchboard panels, facilitating inspection and accessibility.

## FT-1 Switch Construction

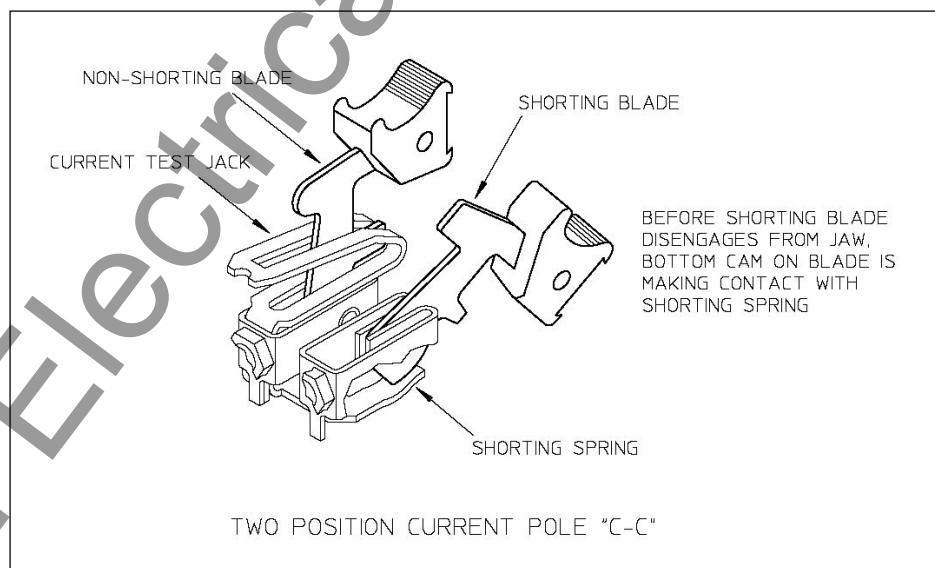

The base of the FT-1 Flexitest Switch is made of a molded polycarbonate material, which provides a tough, insulated enclosure. Barriers are molded into the base (front and rear) to separate the switch units from one another. The barriers provide insulation between poles, and also ample wiring space between terminals. The FT-1X is extended 8.25," 10.25" or 12.25" and the extended enclosure is black anodized aluminum.

### Cover

Flexitest Switch covers provide a tough insulated enclosure for the switch and are made from a polycarbonate material. FT-1 and FT-1X styles come with a black opaque cover or clear cover. The clear cover affords the user the unique option of intentionally leaving switch handles in the open position and replacing the cover while maintaining the provision for a meter seal when some or all switch handles are in the open position. This feature allows the user to service electrical equipment while still complying with OSHA tag and lockout procedures. The clear cover can be ordered separately for retrofit to existing FT-1 Switches. Users will maintain the same ease of accessibility as with the black opaque cover. The cover thumbnut has been modified so that a 1/4" nut driver can be used to loosen & tighten the thumbnut. This is the same size nut driver that is used on the hex head terminal screws of the standard FT-1 Switch.

### Poles

FT-1 and FT-1X Switches are available in combinations of 1 to a maximum of 10 individual poles or switch units. Each pole is identified by a letter (A to J), which is visible along the top of the base from left to right. The individual switch units are of a knife blade type. There are two different types of switch units available: potential poles and current poles. Potential poles (P), are configured as single, non-shorting knife blades for use in potential, trip, or control circuits. Current poles are typically configured in sets of two, (C-C), for use with current circuits; and consist of a current test jack, a shorting spring, a shorting blade, and a non-shorting blade. (See Fig. 2.) The positions of the short circuit springs are visible from the front of the switch.

*Figure 2. Blade assembly of two position pole "C-C"(Rear View, outside of base)*

## Switch Handles

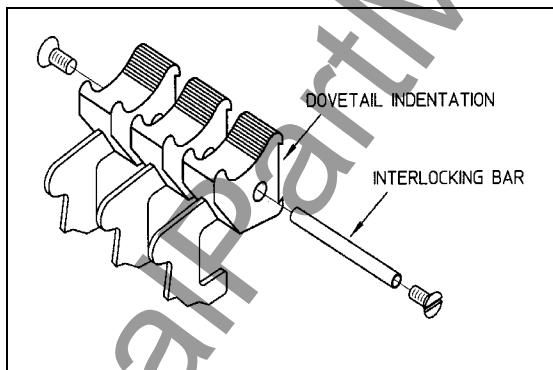

Switch handles are made of a molded phenolic material, and are typically black for potential and current circuits, and red for trip circuits. They are also available in a variety of different colors.

**For color potential switch handles replace the "P" with "T"=Red, "G"=Green, "Y"=Yellow, "Z"=Blue, "W"=White, "O"=Orange.**

**For color current switch handles replace the "C" in any position with "R"=Red, "5"=Green, "6"=Yellow, "7"=Blue, "8"=White, "9"=Orange**

Each handle has a dovetail indentation to hold a circuit identification label. Knife blade switches can be operated independently, or ganged together with a horizontal interlocking bar, to suit testing needs. (See Fig. 3)

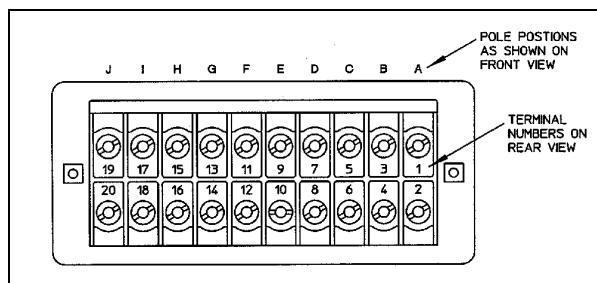

A hole runs through the middle of each switch handle to allow insertion of interlocking bars that can mechanically tie 2, 3, 4, 5, 6 or 10 switch handles together. Interlocking Bars are sold separately. (See "ACCESSORIES – ORDERING INFORMATION" on page 11.)

*Figure 3. Switch Handles*

## Terminals

Connection terminals are located at the rear of the switch. Terminals are numbered 1 to 20 for easy identification (rear view). Each pair of numbered terminals is associated with a matching pole designated by a letter on the front of the switch. (See Fig. 4.)

*Figure 4. FT-1 Switch (rear view)*

## TEST PLUGS

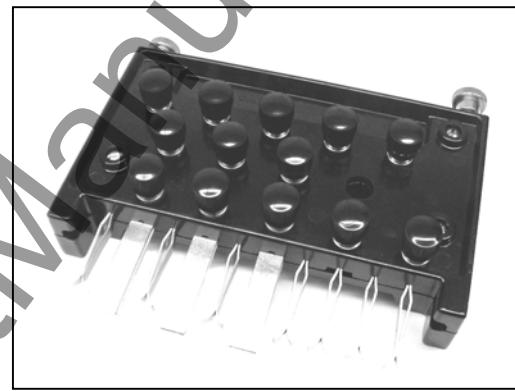

*When using an Individual Current Circuit Test Plug for current measurements, connections from the Test Plug to the measuring instruments must be made before inserting the Test Plug in place*

### In-Service Series Test Plug

The “In-Service” Series Test Plug with a maximum of 10 positions is designed to match the pole configurations of specific styles of FT Flexitest devices (either FT-1 Switches, FT-1X or FT case relays). Not every switch or relay pole configuration is suitable to accept an In-Service Series Test Plug. For available styles, See Table 3, page 12, “TEST PLUG.”

This Test Plug is typically used to connect devices measuring the currents and voltages being applied to the switchboard relays, meters and instruments without interrupting or short-circuiting the circuit. Only the current test switches with the current jack must be opened before inserting the Series Test Plug. Connections to the test plug must be made before inserting the test plug into the FT Switch. (See Figure 5.)

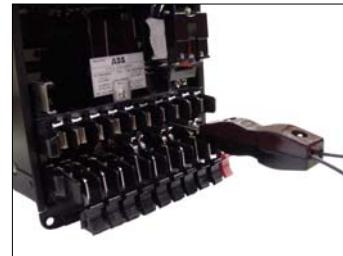

*Figure 5. In-Service Series Test Plug*

### Individual Current Circuit Test Plug

The Individual Current Circuit Test Plug allows in service current measurement with an ammeter. It can be inserted in the current test jack of FT Flexitest devices after opening the knife blade switch. This plug consists of two conducting strips separated by an insulating strip. The ammeter is connected to these strips by terminal screws and leads carried out through holes in the back of the insulated handle. (See Figures 6 and 7.)

*Figure 6. Individual Current Circuit Test Plug*

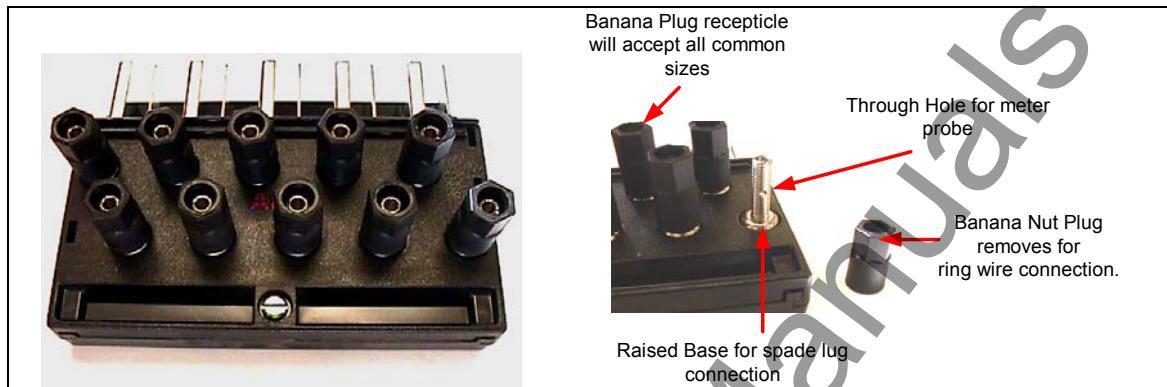

*Figure 7. Individual Current Plug inserted into Flexitest Case*

The test plug inserts into the current test jack with the red part of the handle facing up allowing the alignment nipple and tab to guide the connector into the test jack.

## Separate Source Test Plug

*Provision is made only on current poles with shorting springs to automatically short-circuit current transformer circuits when the knife switches are opened prior to inserting the Test Plug.*

**Figure 8. Separate Source Test Plug, Style # 1164046**

The 10 Position Separate Source Test Plug isolates the external connections from the relay or equipment under test (See Fig. 8). The test plug accepts all common size banana plugs, ring wire connectors, spade lugs and has a through hole for meter probe or wire connection. This test plug provides quick circuit testing, by fitting into the stationary contact jaws of any Flexitest Type FT Case, or FT Switch. The L-shaped test blades assure quick, accurate alignment between the Test Plug and the stationary contact jaws. The blades connect the relay inputs and outputs to a set of binding banana posts on the top of the Test Plug. An insulated barrier along the bottom of the blades isolates the relay circuits from the external connections (ct, pt, trip, etc.). The external test circuits can then be connected to these binding posts, which are staggered for easy accessibility.

Before inserting the Separate Source Test Plug, all switchblades must be placed in the full open position. In a Flexitest Type FT Case, the plug is inserted in the bottom switch jaws with the binding posts up and in the top test switch jaws with the binding posts down. (See Figure 9.)

## Ordering Information

FT-1 and FT-1X Switches are ordered by style number. The FT-1 Selection Guide, (Table 3, pages 12-18) provides a comprehensive selection guide of existing styles. FT-1 and FT-1X Switches are available in any combination of 1 to 10 poles. For a breakdown of Current and Potential poles by style number see Table 4, pages 19-21. A Typical FT-1 Switch Connection Schematic is given in Figure 12 on page 22. Refer to page 10 for example of FT-1 and FT-1X ordering information and ordering options.

The ordering information in Table 3, FT-1 Switch Selection Guide is developed by potential and current pole quantity's. The table begins with a single potential pole configuration and ends with the 10 pole configurations. To order a full compliment 10 pole FT switch, go to the 10 pole section of the table and select the desired potential and or current pole positions then select the style number. (Example: P P P P P P C-C-C-C = 670B197G28.)

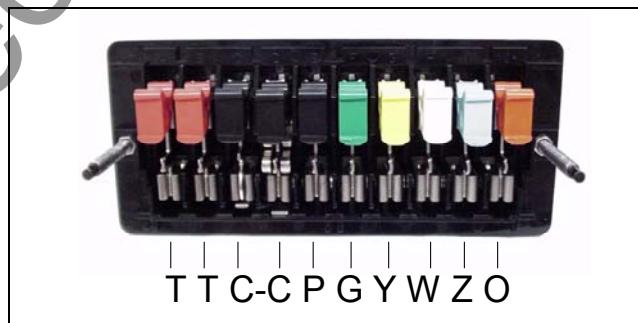

An FT-1 or FT-1X Switch with black cover and screw terminals will be supplied when ordering the standard style number as listed in Table 3, (Example: 129A501G01). An optional clear cover will be supplied instead of the black cover by using style number prefix "C," (Example: C129A501G01). The optional FT-1X extended switch with clear cover will be supplied using prefix "C" and suffix "X08," "X10" or "X12" depending on length required. (Example C129A501G01X08.)

The optional stud and nut terminals are available for the FT-1 only. For this option use style number prefix "S," (example: S129A501G01) and for optional clear cover, stud and nut terminals use style number prefix "CS." (Example: CS129A501G01.)

For FT-1 and FT-1X Switch requirements not matching an existing style number in Table 3, select the style number that comes closest to the desired configuration and indicate this in the ordering information as similar to the style number chosen. Also define the necessary requirements for the new switch configuration. Customers may also place an order by providing a complete switch arrangement definition. (Example: P P P C-C C-C C-C P.)

## Switch Arrangement

Pole positions are identified from left to right on the front view of the switch by the letters "A" through "J" and pole designations are used to identify each type of pole. To develop a complete Switch Arrangement that describes a unique FT-1 or FT-1X Switch, arrange pole designation sequentially from left to right (A-J). (See Figure 10.)

*Figure 10. Color Handles with pole designation Identifier*

## Potential Poles

P = Potential or control Circuit Black Handle. For color potential switch handles replace the "P" with "T"=Red, "G"=Green, "Y"=Yellow, "Z"=Blue, "W"=White, "O"=Orange.

## Current Poles

C = Current Circuit Non-Shorting Black handle. C-C, C-C-C, C-C-C-C = Current Shorting (make before break). For color current switch handles replace the "C" in any position with "R"=Red, "5"=Green, "6"=Yellow, "7"=Blue, "8"=White, "9"=Orange.

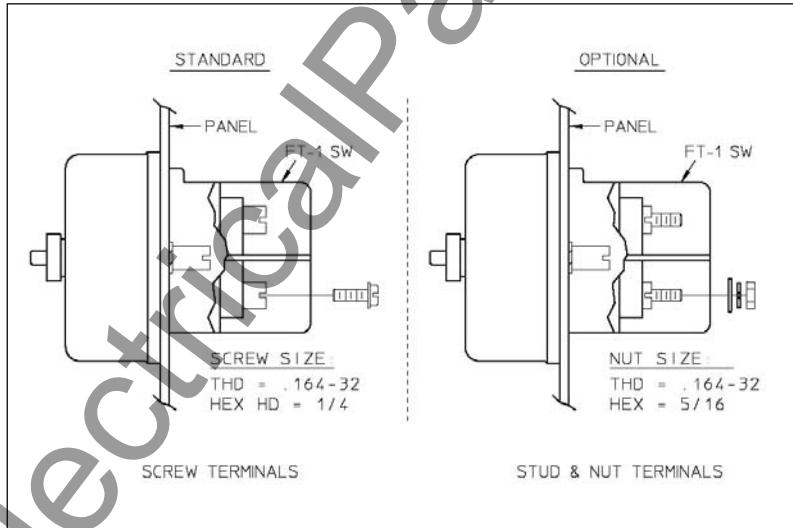

Every pole position has to be defined by a "Pole Designation" ("X" defines an empty pole position). Current poles can span more than one pole position. (Example: P P P P C-C-C-C T).

A space is the delimiter between potential pole designations and current poles not requiring the shorting bar, (example: P P P C-C C-C C-C P) is the complete switch arrangement definition for style number 129A514G01.

For a listing of available Pole Designations and their definitions see Tables 1 & 2 on page 9. All switch arrangements developed or ordered should be checked for adequate current transformer shorting when applied to current transformer circuits.

## Terminals

All required terminal hardware is supplied with each FT-1 Switch. Screw Terminals are provided with standard FT-1 Switch styles. They require customer connections be made with a hex washer head screw. (See Fig. 11.) Stud and Nut Terminals is an optional feature and connections are made with two washers and a nut. (See Fig. 11.) A special nut driver can be purchased from ABB to connect to stud terminals. Note: The FT-1X screw terminations are #8 Phillips/slotted and the only option provided for extended version FT-1X. (See "FT Switch ordering Information" on page 11.)

*Figure 11. Standard and Optional Terminals*

## Accessories

In order to assure that switches are opened simultaneously a locking bar can be installed for 2 pole positions or all pole positions.

Banana type safety patch cord plugs are available for connecting equipment to the test plugs. The plug incorporates a retractable sleeve that isolates the user from connections. The patch cords are available in a set of 1 red and 1 black patch cord. These patch cords are highly flexible and durable and rated for 32 volts AC at 32 amps and 300 volts AC at 9 amps. (See "Accessories Ordering Information" on page 11.)
